A SaaS, white labeled and modularized platform to deliver powerful services.

Based on state-of-the-art technologies, Privowny's platform is a multi-region virtualized environment hosting powerful services. Each service is redundant and highly resilient, and can scale to demand.

Privowny App is available as a Web Browser Extension for Chrome and Firefox. It is also available on Android (5 and above) and on iOS (10 and above). Our offering is highly customizable from simple branding/white labeling to full SDK and API access.

AI Machine Learning

OpenID External Authentication

Build you own set of protection and privacy services among our modules using your own brand.

- Privowny's platform is highly secured. By design, customer data is safe and protected via modern cryptography techniques.

- Privowny cannot decrypt any encrypted data, only end-users can with a Master Key only they know. Even with brute force and quantum computation, by design, keys cannot be reconstructed or decrypted in a standard way.

- The Platform also offers very powerful user and session management features. It further supports identity brokering such as Social Authentication, OpenID Connect brokering, SAML, and Identity Federation.

- Users are always in control of all their sessions across devices and in case of a lost device, users can revoke/disconnect all sessions.

- Privowny's platform provides a lot of metrics on technical operations, but also on how the service is used by consumers. For example, it is possible to know data usage by feature, device, population, time and other attributes.

- Privowny's platform offers many operational features that allow the refinement and improvement of the service over time through powerful tracker management, web site semantics tools, and machine learning.
