Shipping Notification

At Audeze, the health and safety of our employees and customers are our top priority. Because of the lockdown currently in place in California, we are limited in our ability to manufacture and ship headphones. We are fulfilling orders as quickly as possible and appreciate your patience.

If you need service/repairs, please write to support@audeze.com as usual. Because everyone is working from home, it may take a little extra time to respond, and it will definitely take a little longer for repairs. Thank you for your understanding, and we wish you health and safety.

Audeze Reveal+ Plugin
Personalized Virtual Studio for Producers & Engineers.
In addition to our standard headphone presets, Reveal+ offers the following:

- Update: An improved UI experience with integrated QR code display for A.I. assisted HRTF capture
- Aural Map based spatial audio that's measured to **your** ears!
- Personalized HRTF, measured with your mobile camera and processed by Embody*
- HRTF *aware* presets retain tonal balance even when spatialization is enabled
- Selectable speaker setup
- Sampled room response from world-class mixing and mastering studios
- Ambience control - customize the level of room reflections

Audeze Reveal+ Plugin

Reveal+ is the premium edition of our widely popular Reveal plugin, which applies carefully designed filter presets specific to our headphone models. These provide the producer/engineer with an experience similar to what they would hear from high quality studio reference monitors in an acoustically treated room (but without the pesky room reflections and reverb). We call this the Audeze Target Response. For professional applications, Reveal+ allows mixing and/or mastering in virtually any location while ensuring your work will translate well to most any system.

NEW FEATURE Aural Mapping

The human ear is as unique as a fingerprint, and from an early age your

brain is trained to localize sounds based on your unique physiology. Just like you can't wear someone else's glasses, using a generic HRTF may confuse the brain, causing localization errors, and impairing your spatial audio experience!

Reveal+ audio plugin features groundbreaking Aural Map technology crafted by Embody, an industry-leading audio company specializing in sensory experiences. With the Aural Map, you can create a personalized HRTF by simply taking a picture of your ear using a unique QR code displayed on the Reveal+ plugin on login. Once the picture has been uploaded to the cloud, Embody's advanced machine-learning algorithms convert that picture into a unique spatial profile, or Aural Map, which can be downloaded directly into your Reveal+ plugin. Enjoy premium spatial audio that's been crafted specifically for *your* ears!

Aural Map Crafted By
EMBODY™

Intuitive Design Interface

This intuitive plugin is extremely easy to set up - simply download and install the plugin package, load it into your DAW or music player software, and select the model of Audeze headphone you're using. To add your personalized Aural Map into the mix, simply click over to the Aural Map tab, enter your registered email address and select your HRTF file from the dropdown menu!

The Reveal+ plugin is compatible with DAWs and playback software that supports AU, VST plugins, or AAX plugins. Compatible DAWs include ProTools, Logic, Ableton Live, Digital Performer, REAPER, and others. Compatible audio playback software includes JRiver, Audirvana Plus, Pure Music, VOX and others. The filters used by the Reveal+ plugin were designed for all commonly used sample-rates (44.1 kHz - 768 kHz), so no resampling happens no matter what sample-rate you use. Reveal+ Plugin is designed to be transparent and as unobtrusive as possible and does not apply any spatialization, reflections, crossfeed or resampling when Aural Map is not enabled.

FEATURES	REVEAL LEGACY
Audeze Presets	2018 or older models
Operating System	macOS 10.9 - 10.14 / Windows 7

A QUICK START GUIDE FOR
THE AUDEZE REVEAL+ PLUGIN

AUDEZE   Crafted By **EMBODY**

Setting Up Audeze Reveal+ Plugin

To install the Reveal+ audio plugin, download the Reveal+ Plugin zip file. Once the download is complete, double click on the downloaded file to unzip and run the installer. The installer should prompt you to select which components you want to install, and the directory in which you would like to install them. Be sure you install the versions you need for your system and put them in the location recommended by the provider of your preferred software (usually the system plugins folder).

Most DAW plugins and music player applications work in similar ways, but there are some differences in the way plugins are integrated. We suggest you contact the maker of your particular software if you have specific questions, but we have included a few examples below to help get you started!
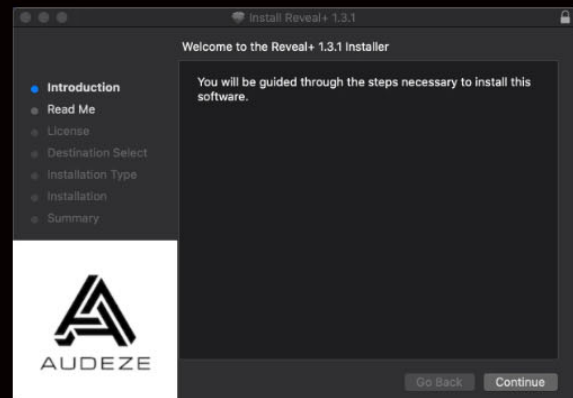

Reveal+ Setup   DAW Setup   Media Player Setup

Getting started with Reveal+

Download the Audeze Reveal+ plugin from the link included in your confirmation email. The zip file includes 64bit installers for both Windows and Mac, as well as a 32bit version for Mac.

Once downloaded, launch the desired installer and follow the instructions as prompted.

Install Reveal+ 1.3.1
