 Offers iPad App 

The Audeze Cipher cable and the accompanying Audeze HQ application were designed for Audeze's award winning line of Headphones. Our headphones are designed to deliver the best in class sound quality. The Audeze HQ app allows you to customize the sound of the headphone to your liking. Audeze's unique EQ is different and it travels with your headphones. As you move our headphones from your iPhone to your iPad or iPod, you get the same sound! This app is designed specifically for Audeze's Second generation of integrated digital audio Lightning cable for use with EI-8, SINE, iSINE and LCD-i4 line of headphones.

The Audeze app features a 10 band equalizer that lets you apply a EQ curve to any music you play through your iPhone or iPad. The app allows you to save EQ curves as presets and apply firmware updates to Audeze's digital audio cable.

firmware updates to Audeze's digital audio cable.

This App is intended for use with the second generation of Cipher cable only. This App will not recognize the previous generation of Cipher cable.

We have now added Aural Map for Reveal+. In order to use the Aural Map Feature in the Reveal+ plugin, just take a photo of your ear with the Audeze HQ app. Embody's machine learning algorithms create a unique spatial profile based on the physiology of your ears. This profile, or Head-related transfer function (HRTF), is then downloaded directly to your Aural Map on Reveal+. The Aural Map feature can be used without Cipher cable.
