

AMPLIFIERS

The PhaseTech® P350 amplifier was designed for maximum versatility in amplification, with a "G" design. The P350 is the companion amplifier to Phase Technology custom in-wall subwoofers, operating as a full range high current, high performance, mono-block audio power amplifier. The P350 features EQ, sub filter in/out switch, switchable low pass crossover, a level control for matching your system, and phase control for matching the output phase to that of your speakers.

The P3-35 is a three-channel mini-amplifier that features digital and analog inputs, Bluetooth control (right from your smart phone), RS232 control port, IR learning (so you can program your television), and even a line-level subwoofer output option, allowing you to integrate any powered subwoofer. The P3-35 features Dolby Digital® decoding, ensuring that you'll never lose the surround content in your audio. The P3-35 measures only 1 1/4" x 4" x 7 1/4", so it is small enough to fit behind a wall mounted TV and, when paired with ultra-thin Teatro speakers, will create the perfect installation scenario for this powerful and
