

## Speakers For Your Life

PhaseTech® (Phase Technology®) began as United Speaker Systems in 1955 and has stayed on the leading edge of speaker design and engineering since that time. The company founder, Bill Hecht, began his career developing Cinemascope stereo technology for motion picture projection in the early 1950's. The company's early work involved OEM speaker designs for other companies. In 1983 the Hecht family founded PhaseTech, enabling them to utilize their industry-leading designs in a speaker line of their own.

The engineering team at PhaseTech has developed, patented and employed numerous technologies in their products including the industry-standard soft dome tweeter, Vapor Deposited Titanium woofers, self-damping voice coils, uniframe woofer construction, improved mounting systems, solid piston drivers and more. Key to the amazing sound of PhaseTech products are the Absolute Phase® crossover networks built into most speakers. These crossovers ensure that the speaker drivers are acoustically and electronically in phase, and thus moving in unison. Absolute Phase crossovers ensure a well-defined soundstage with precise imaging and increased depth of field.

Today, PhaseTech is known for producing speakers that match the performance and reliability of any high-end manufacturer, at a value that's second to none. Bill Hecht's son Ken now leads the R&D team at MSE Audio and is deeply involved in the development of all PhaseTech home entertainment speakers. He and the rest of the MSE Audio R&D team ensure that MSE Audio products consistently earn critical acclaim from home theater and audiophile enthusiasts worldwide.
