

# Who We Are

## Overview

Established in 2008 and based in Chesterfield, Missouri, Boomerang Tube LLC (Boomerang) produces highly engineered oil country tubular goods (OCTG) for consumption in the US and Canadian natural gas and crude oil drilling markets. We offer Electric Resistance Welded (ERW) and Seamless tube, full finishing capabilities, and both API and Semi-Premium threading. We do it all using domestic steel, supporting American jobs, and maintaining the strictest quality standards in the business. The primary raw material utilized for production of ERW tubes is hot rolled steel coils which are obtained domestically from qualified flat rolled producers. Inbound and outbound transportation is by truck, rail, and barge either direct or through trans load locations near our plants.

## Our Facilities

## Liberty, Texas

Our 500,000 square foot facility houses heat treat capability of 300,000 tons per year and two Electric Resistance Welding (ERW) mills with 480,000 tons of annual capacity for ERW pipe. We offer full in-house finishing with two PMC and CNC thread lines along with a dedicated Semi-Premium thread line, and our high-speed hydrostatic testers keep up with mill speeds and assure quality. The Liberty facility also boasts two full length, full body phased array ultrasonic inspection units and advanced threading capabilities.

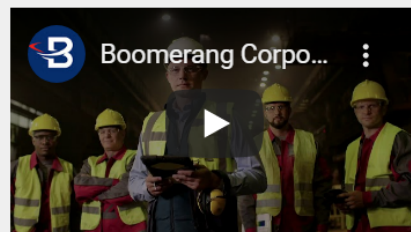

## Houston, Texas

Acquired in 2018, our Houston facility boasts 350,000 square feet of manufacturing space which allows us to provide seamless pipe and processing of green tube. The Houston facility allows us to process overflow production from our Liberty, Texas plant and provides an incremental 120,000 tons of capacity per year. We utilize this facility, which is only 37 miles away from our 500,000 square feet Liberty site, to handle processing of OCTG. Our Houston site boasts a state-of-the-art Danieli soaking furnace, phased array ultrasonic inspection, advanced high-speed threading, inline quench and temper, inline straightening, and automated hydrostatic testing.
