SAFEGUARD YOUR VALUABLE RESEARCH MATERIAL WITH WICELLSAFE™

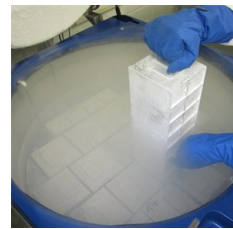

Follow this link to [request additional information](#).

WiCell now offers economic, long-term LN2 storage solutions to meet your lab's needs. Trust WiCell's 20 years of stem cell banking experience to safeguard your materials. You can have confidence that the materials you entrust to us will remain safe and secure until you need access to them. We will treat your critical materials as if they were our own, protecting your research from disastrous losses associated with power outages, equipment failures, and other catastrophic events.

We have storage options tailored to meet your specific needs. Research grade and GLP storage are available by the box (standard 25 vial or 100 vial cryo boxes) in our auto-filled CryoGuard™ Liquid Nitrogen tanks. All materials are maintained in vapor phase, and boxes are exclusive to each client. Storage tank selection options include general research, xeno-free, and non-human tanks.

Secure transfer and storage maintains the cold chain to ensure the quality of your research materials. From your dock to ours, we monitor the shipment in real-time assuring that temperatures are maintained, and alerting the transport response team to intervene if any issues are evident. Upon receipt, clients are notified immediately and material is entered into WiCell's Laboratory Information Management System (LIMS), tracking each vial to the specific box location, rack, and tank.

Storage rooms are climate controlled with appropriate circulation and ventilation to maintain optimum operation of all LN2 tanks. WiCell utilizes a continuous monitoring system that provides temperature tracking 24 hours a day, with data backed up nightly. Comprehensive preventive maintenance on the monitoring system and LN2 tanks is performed regularly. Back-up power systems immediately activate in the event of a power failure, and our emergency response team is on call 24 hours a day, 7 days a week, year-round. With your materials stored at WICELLSAFE, you'll have one less thing to worry about. Rest easy knowing that your materials are secure and available if and when you need them. Safeguard your materials today.
