## Louisiana's Premier Roofing Product Supplier

Tandem Roofing, LLC has been providing professional roofing products to New Orleans and Baton Rouge, LA area business owners and homeowners since 2003. We are the only company in the world with metal roofing that is wind-rated for up to 300 miles per hour, and our patented EZY Curb™ metal roof daylighting system will change the face of your warehouse or commercial building. We are customer-focused, so you can rest assured that your project will be managed in the most efficient, timely manner possible.

## The World's Only 300 MPH Wind-Rated Roof

### Tandem 300™ Roof

The Tandem 300™ is a patent-pending metal roof system and is the only metal roof in the world that can withstand 300 mph winds.

Due to its unique patent-pending technology, the Tandem 300™ metal roof can withstand impacts of 4-inch in diameter hail without leaking, where other metal roof systems are limited to an impact of 2.5 inch in diameter hail. The Tandem 300™ comes in R-Panel and standing seam.

#### Commercial

The Tandem 300™ costs less than traditional industrial standing seam metal roof systems. We can also offer a complete daylighting system with the Tandem 300™, saving customers significant amounts of money in electricity costs year after year.

#### Residential

The Tandem 300™ metal roof system offers a complete hurricane strapped roof system unlike all other metal roof systems.

## Metal Roof Daylighting

### Before & After Daylighting

See the amazing improvements made using our daylighting systems. The pictures below show the same warehouses before daylighting (on the left) and after daylighting with the EZY Curb™ system (on the right).

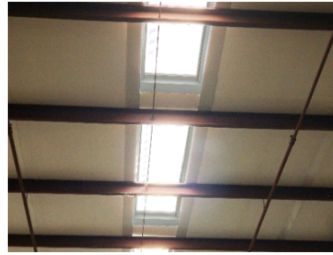

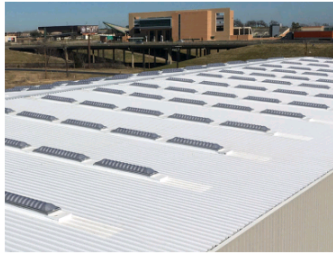

Tandem Roofing utilizes the patented EZY Curb™ skylight system to daylight the interior of commercial and industrial buildings. The EZY Curb™ system has no screws in the lows and does not require a subframe when installed over purlins and web joists. EZY Curb™ systems will not leak.

### Multi-Unit EZY Curb™

The multi-unit EZY Curb™ system allows continuous runs of skylights to be installed allowing for sufficient distribution of light to achieve light levels 3-5 times greater than traditional indoor lighting.

### Single-Unit EZY Curb™

The EZY Curb™ standalone unit is made to replace existing fiberglass skylights or to tailor the specific light levels desired inside of a building.
