## Identify Problems Early

## Turn Data In To Decisions

**A platform that is revolutionizing  
the monitoring & maintenance world.**

Get ahead of system outages before they cost you time, money, and credibility.

Focus on the customer and driving the bottom line instead of being on 24/7 watch.

Quit spending energy setting up and maintaining systems that simple don't perform.

# We knew that developing just another system monitoring software wasn't good enough.

For years we've watched enterprises try and find a monitoring system that addresses network needs core to their business. For too long companies have been tied to manufacturer limitations, system outages caused by late notifications, and costly resources spent on triage.

LOGiC is a reliable, 24/7 monitoring system that self heals and self learns, giving you access and insight into your own technology before it's too late.

## Let LOGiC do the heavy lifting

We've built LOGiC to use technology as it was intended: to reduce cost, reduce labor, and provide you the right information at the right time.

### Proactive Issue Identification

Custom thresholds allow you to define healthy ranges and alert you when they reach alarm status, catching anomalies before an outage.

## Self Healing

Designed to identify and learn through data, resolutions and history giving it the power to think-learn-act with little to no human interaction.

## Single Pane of Glass

Whether you have one site or multiple, one solution or many, LOGiC provides a single platform where all of your documentation, knowledge, and data resides.

## Easy-To-Use

Intuitive platform that's simple to install, manage and maintain. Be up and running in minutes.

## Actionable Data

Reports customized by end user, providing timely and useful information.

**Here's how you can get best-in-class monitoring**

## **SCHEDULE A DEMO**

See how LOGiC works and how it can address your individual business needs.

## **SIGN UP AND INSTALL**

Once you purchase LOGiC, the installation is simple; you can be up and running within minutes.

## **FEEL CONFIDENT 24/7**

See the immediate benefits of reliable system monitoring that self-heals and notifies you of issues before it's too late.

# Specifications

## Monitoring

- Internet of Everything (IoE) communication between people, process, data and things
- Internet of Things (IoT) all communications between machines
- Infrastructure - the core of your network

## Features

- Managed inventory, ticketing, notifications and reporting
- Proactive intelligence and remediation
- Customizable
- Effortless deployment, setup and use

- Backup and failover
- Scalable as you grow

# Platform abis solutions

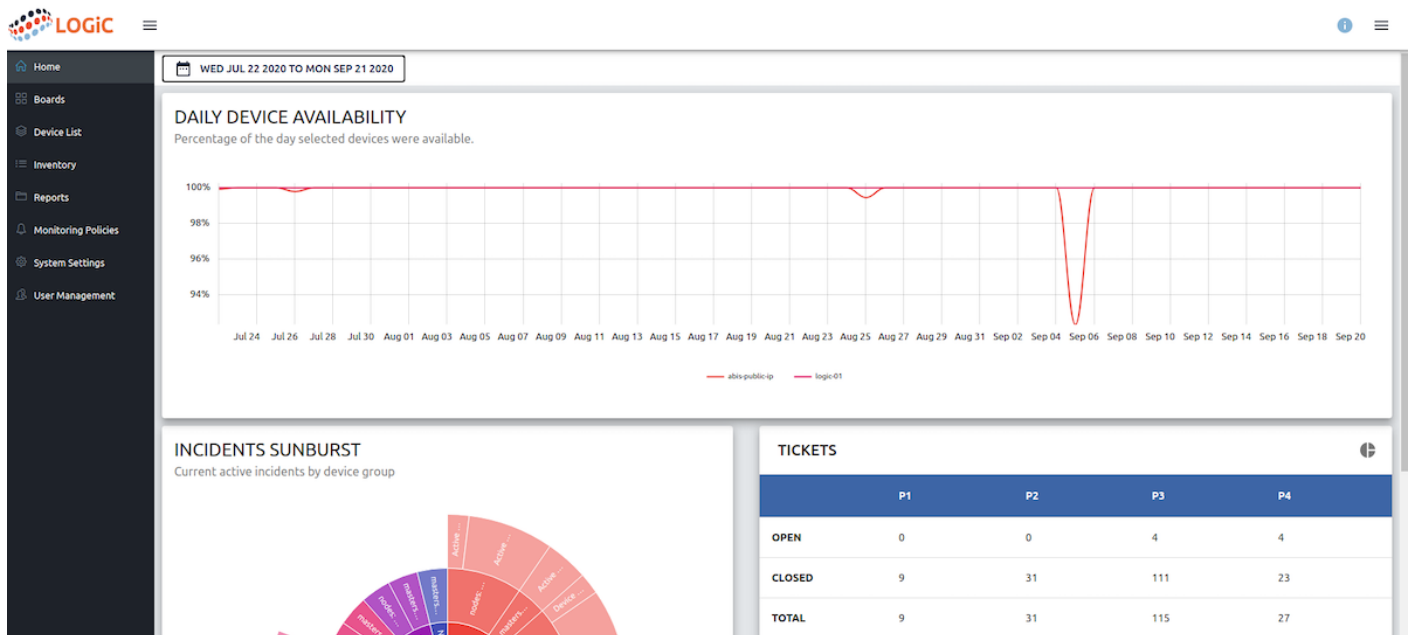

- Strong security
- (https)
- Historical data learning
- All encompassing (one platform)
- Maintenance and upgrades included

## Industries

- Education
- Energy and Gas
- Financial and Insurance
- Government
- Healthcare \ Pharma
- Hospitality \ Mixed use
- Manufacturing
- Nonprofit
- Public
- Technology
- Telecom

## Built to Address Every Need

### Real-Time Dashboard

## All Your Systems in One View

Integrate LOGiC with your current processes and technology for a unified view of your business. Watch for incidences by device group and check ticket statuses quickly by incorporating your own ticketing system or using ours.

One System, Every Device

Predictive Notifications

## Get Started

Let LOGiC replace the need for constant watch and wasted resources so you can focus on your customers and moving your business forward.
