America's Best OSA Device

For a better night sleep with no snoring & reduced Sleep Apnea, we are different from all other Oral Appliances because our **Patented** OSA Device makes more room for the tongue. **Fits with no adjustment from the dentist!**

Here at Slow Wave Inc., we offer a new approach to stop snoring and obstructive sleep apnea. By creating custom oral appliances, your jaw can be moved downward into a more natural, comfortable position.

Testimonials

19

The Slow Wave OSA oral appliances have totally replaced my need for the C-Pap. I have been reliably and partially dependent on the C-Pap for several years due to snoring and moderate to severe sleep apnea. The devices take a little bit of getting used to and training, however the well-trained and friendly staff at Slow Wave are always there to help. After a week or so, you will hardly know they are in your teeth and can also drink water. This treatment for snoring and sleep apnea goes well beyond the device. They also teach you ways to sleep and proper habits to help you succeed in a great night's sleep with high oxygen numbers without the C-Pap. Spare my first Christmas away from home without my C-Pap this year! So nice!

I have been wearing this slow wave oral appliance for several years. My sleep (no more central apneas) has been confirmed by at least three in-clinic sleep studies and reinforced by my wife every night for the majority of our 35 years of marriage.

After repeated and persistent "encouragement" by my wife tired of being woken up by my snoring, I read the white flag of surrender and signed up to get a CPAP device. "What could be so bad about that?" I thought to myself? "After all, many of our family and friends told me what a difference that CPAP machines had made in their lives." However, when I passed them on what a hassle it must be to strap on a mask each night, everyone of them said, "Yes, it's a hassle and pain, but you got used to it."

So, I signed up and worked with a leading provider of CPAP machines and got the top-of-the-line machine. I had all the bells and whistles. They were great to work with and sent me every kind of mask configuration they had but kept waking up gasping for air and finding my mask partially off my face. After months of trying, I came to the realization that a CPAP machine just isn't for me.

My decision to not use my CPAP machine not only impacted me and my sleep but also my wife's sleep. We were inseparable, well at least my wife was. I discovered a thoughtful online snoring forum.

There are two primary components to the Slow Wave system. The first is a blood oxygen monitoring ring I wear on my finger. It is the size of a Super Bowl ring that I got used to almost immediately. It alerts me in the night, via vibrating, when my blood oxygen levels have fallen to an unhealthy level. It gently wakes me up by gently vibrating to wake up enough to change my sleeping position and immediately fall back to sleep. I now gather to the point that I don't even notice being awakened up. Another really nice feature of the ring is that not only monitors my oxygen levels in the night but then shares the data for each night into an app and to my computer through a Bluetooth connection. It's a data geek and find the data is really helpful. I have opted to share my data with Slow Wave and they provide me feedback and continued encouragement.

The second component of the Slow Wave system is a custom fit mouth piece that is very comfortable to wear. It keeps my mouth and tongue from going back into my throat. The combination of the blood oxygen monitoring ring and the mouth piece make such a difference.

The Slow Wave approach has dramatically changed the quality of my sleep and, as a result, having a huge impact on the quality of my life. It is also important that I give a major "shout-out" to the Slow Wave staff. They patiently explain how everything worked and were fantastic in every way.

"I heard about Slow Wave and their idea of a totally out of the box approach to the treatment of obstructive sleep apnea. No more leading around a machine with bunches of supplies that constantly need replacing. And no surgery to implant a device in your body with batteries that will need periodic replacement in one company's premises. Just a simple, precision designed oral appliance that is worn in your mouth while you sleep and taken out each morning.

It's all you what. It works for me. No more interrupted sleep for me or my wife. My sleep apnea events are greatly reduced to an acceptable level when I sleep while wearing the Slow Wave device according to the data collected easily each night with a wearable O2 ring.

My quality of life has been restored thanks to the fine folks at Slow Wave."

"The Slow Wave OSA device has been a game changer to my sleep quality. Before using this device I woke regularly throughout the night due to my bruxism and apnea which I have been suffering from since my youth. Much like everyone else after a restless night, I experience the sensation of being groggy and hyper-sensitive upon waking up. However, since using the device I have noticed that I sleep longer and usually through the night and feel more energized in the mornings. I can finally breathe at night time without waking up with a sore jaw or a pulsing headache. There is no night that passes that I do not wear my OSA."

"I have really enjoyed my OSA device by SlowWave! I have had many issues with my sleep since my time in the military and it really was starting to show. It was like I had been slowly drained of my energy. Since I started using the OSA device, however, I have noticed a drastic restoration of my energy levels. Now, most mornings I wake up and feel like I actually rested that night. I have to wear it at night if I want the best me the next day."
