rippleLabs

≡

Welcome to Ripple Labs,

creators and supporters of the Ripple protocol.

About Ripple Labs

Ripple Labs (formerly OpenCoin) developed the Ripple protocol. Its team of experienced cryptographers, security experts, distributed network developers, Silicon Valley and Wall Street veterans contributes code to the open-source software and works with financial institutions and payment networks to accelerate the growth of the protocol. The team shepherds a movement to evolve finance so that payment systems are open, secure, constructive and globally inclusive.

The San Francisco-based startup is funded by investors including Google Ventures, Andreessen Horowitz, IDG Capital Partners, and Core Innovation Capital.

About Ripple

Ripple is an Internet protocol that interconnects the world's disparate financial systems to enable the secure, real-time transfer of funds in any currency. As settlement infrastructure, Ripple transforms and enhances today's financial systems. Ripple unlocks assets and provides access to payment systems for everyone, empowering the world to move value like information moves today. For more information, please visit ripple.com.
