

OVERVIEW

The Analytic Technology Industry Roundtable brings together leaders of analysis and analytic technology companies to have open dialogue and achieve common goals. The Roundtable serves as a focal point for the analysis and analytic technology industry. The objective of the Roundtable is to bring together leaders of analysis and analytic technology companies to have open dialogue and achieve common goals. The Roundtable membership seeks to address certain industry priorities and general topics of interest and concern as related to analytic and analysis technology. By coordinating on key topics and interests, the Roundtable seeks to ensure government officials hear a cohesive industry voice. Roundtable will be used to inform decision-makers and the U.S. government on topics related to analytic and analysis technology. The Roundtable operates as a collaborative organization. Technology companies engaged in the analysis and analytic technology U.S. government market may join the Roundtable.

In the FFRDC role, MITRE is able to provide the Roundtable with a neutral environment, guidance, and structure.

The Roundtable is engaging senior-level government sponsors to learn their organizational priorities and mission requirements as related to industry, and discuss and propose improvements for government and industry engagement. The group seeks to achieve technical goals of community interest. The Roundtable also seeks to engage the U.S. government on topics of concern to the analysis and analytic technology community. The Roundtable seeks greater and higher quality communication between the U.S. government and analytic and analysis technology community, leading to better solutions and generate additional support for the Roundtable mission.

Roundtable membership currently includes: IBM, Centrifuge, MapLarge, Recorded Future, Cloudera, Lexis Nexis, MarkLogic, Mongo DB, NetOwl SRA, SAP, Thomson Reuters, SAS, ESRI, and Tableau. We expect to expand the group to include many more companies (Winter 2016). MITRE's ATS Lab Program is currently hosting the Roundtable. Host and Chair: Dr. Angela O'Hanlon.

For more information about the Roundtable's specific studies, please refer to our [Studies](#) page.
