## Corda tools + libraries

Corda uses existing technologies and languages to make development easy. Use these tools to kick start your CorDapp development.

Node Explorer

The Node Explorer provides views to the node's vault and transaction data using Corda's RPC framework.

[Learn More](#)

Blob Inspector

Wire-stable AMQP serialization format, as a binary format, has various advantages over text-based protocols, but also has the same downside: lack of human-readability. The Blob Inspector fills this gap.

[Learn More](#)

Network bootstrapping

This tool scans all the node configurations from a common directory to generate the network parameters file, which is then copied to all the nodes' directories.

[Learn More](#)

Token SDK

Access Token SDK - a standard interface to create, issue and trade tokens on Corda.
