Thinci is now Blaize!

## Intelligence at the edge of everywhere.

Blaize unleashes the potential of AI to drive leaps in the value that technology delivers to transform markets and improve the way we all work and live.

→ [Learn more](#)

New Computing for a New Era

Blaize is a groundbreaking deep technology company focused on making AI broadly accessible to enterprises and people. Our breakthrough silicon architecture and innovative software platform empower designers to more fully exploit the benefits of AI and lead the largest tech transformation in decades.

→ [Learn More](#)

## Built for AI Workloads

We've only scratched the surface of an AI world. If you want AI applications that run across edge devices, operate at low power and touch millions, or that scale economically in data centers, don't look to hardware platforms and software tools of the past. You need a new approach that doesn't quickly run up against barriers of energy, cost and complexity.

### THE BLAIZE GRAPH STREAMING PROCESSOR (GSP)

architecture is powerful, energy efficient and adaptable to overcome the limits on computing that keep AI, machine learning and deep learning from doing all it can do. Our graph-native Picasso software platform is equally radical, simplifying and speeding deployment of your breakthrough AI applications, from the data center to the edge of everywhere.
