## Co-engineering Program Phases

Transonic has a long history of working with both start-ups and established medical device companies to develop custom-engineered volume flow measurement solutions that suit a wealth of applications. The Co-Engineering Program is designed to meet the unique needs of your business and streamline the OEM process, from prototype to production.

## Prototype Development & Testing

Pre-development research and concept validation  
Prototyping  
Internal and partner testing  
Design / documentation modifications as appropriate

## Pre-Production & Validation

Production plan  
Supply agreement  
Delivery of pre-production units  
Partner and end-user testing and validation

## Production & Continuous Improvement

Delivery schedule  
Full scale production go-live  
Ongoing QA/RA oversight  
Continuous improvement
