Product Overview

Healthcare organizations constantly struggle to decrease the time-to-value for their analytics investments. And existing analytics staff are overwhelmed by high volumes of custom analytics requests, requiring organizations to consider hiring additional expensive analytics to scale capacity.

Population Builder enables organizations to do more with their existing analytics resources, while expanding the benefits of their analytics investments to a broader range of stakeholders. Population Builder not only helps relieve the pressure on overburdened analysts with too many report requests, it also helps healthcare organizations realize the potential ROI of their analytics investments.

BENEFITS & FEATURES

Dramatically reduce analytics development time. Replace lower-level reporting work with a collaborative process, using a visual population-building interface.

Unleash the analytic use of data throughout your organization.

Democratize and govern access to your data assets throughout your organization and reduce stakeholder dependence on expensive, hard-to-find SQL experts.

Improve stakeholder buy-in and trust throughout the analytics process.

Population Builder's elegant drag-and-drop interface enables non-technical analysts and stakeholders to build and modify populations, exposing transparent definitions to all stakeholders.

Speed up analysis and accuracy.

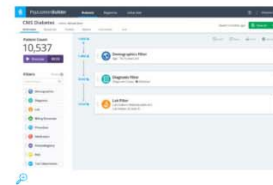

The Population Builder library includes access to 400 nationally recognized populations, as well as national quality improvement and regulatory code sets to build accurate populations faster.

Maintain and govern organization-wide population definitions for key populations.

Reusable population and value sets are built across clients using shared data marts—and published and reused across the Health Catalyst Data Operating System (DOS™).

Reduce costs.

Grow analytics team capabilities without increasing headcount.
