

GILT COLD BREW SYSTEM

The Best Way to Get High Quality Single-Origin Coffee Served Cold and on Tap During the Dreadful New York Summer Heat.

The concept of cold brew coffee creates a strong yet smooth tasting cup while eliminating the acidity of your typical iced coffee. Our cold brew is mastered with the same passion we put into roasting our coffee. Available in our 5 gallon kegs, our cold brew is best enjoyed black, on the rocks. The kegs are stationed in our Kegco kegerators that create an ideal storing and pouring situation for your business.

Our method is simple. Our single-origin beans are roasted exclusively for our cold brew. The coffee is housed in our 87 gallon brewers for 48 hours, which allows the water to pass through the grounds for longer, leading to a significantly higher caffeine quantity. Once the coffee is brewed, we pour it into our nitrogen infused kegs that conveniently keep the coffee fresh and cool.

The nitrogen really does wonders for the cold brew by adding creaminess and a smooth flow to the coffee. The satisfaction and richness of this beverage can compete with the likes of a cold beer - and it comes out of a tap too! Watch the velvet creaminess slowly rise before you enjoy this vitalizing beverage. And you can forget about adding milk. Our cold brewed coffee is as smooth as they come and the best tool to get your day started and keep it going.

5 Gallon Keg

- Full Keg - 48 lbs.
- Diameter - 8.25"
- Six week shelf life

Kegco Kegerator

- Digital Temperature Control (32-75°F)
- Can hold up to three 5 gallon kegs
- Comes with necessary equipment to tap two kegs
- Includes dishwasher safe removable built-in drip tray

GILT COLD BREW SYSTEM

KEGERATOR SYSTEM

Installation - \$1,100

Includes 1 Keg & 1 Nitrogen Tank

NITROGENIZED 5GAL KEG

Supplies 80 - 8 oz. Servings

7 oz. Yield for Ice per Cup

\$175

COMPRESSED NITROGEN TANK

Supports 5 Full 5 gal. Kegs

\$40 Refill
