Clinical Data Strategies To Build High Performing Practices

Medical Advantage Group works with health plans, delivery systems, and providers to improve care, and attain success in value-based healthcare. Our years of experience, data-driven strategies and in-person approach have helped health plans build a bridge to engage their provider network to deliver better care and outcomes. We'll deliver a win-win plan that helps you increase your HEDIS and Star ratings, improves provider relationships, and accelerate your success in value-based care.

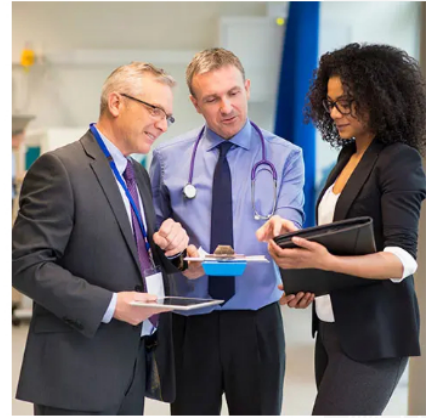

A Bridge Between Health Plan and Provider

Many of us have worked for health plans and understand the complexities of provider relationships. Our goal is to help you meet them where they are and work together to improve patient experience, population health, and care efficiencies with an actionable plan.

Onsite Healthcare Consulting

Our practice transformation coaches work in the practice as trusted advisors to help providers adapt to industry changes, and stay profitable, while still focusing on their patients. We've walked side-by-side with hundreds of providers to simplify the maze of complex insurance policies, convoluted government legislation, and stacks of patient records. Our deep experience in value-based healthcare combined with hands-on coaching drives meaningful improvement in patient care and health outcomes while attaining optimal financial performance for the practice and the health plan. The coach is focused on making the practice and health plan successful in their shared goals.
