

The City of Tomorrow Symposium creates a unique environment for public and private sector leaders to examine the changing landscape of our cities, forge meaningful connections and advance ideas that drive human progress through the freedom of movement.

With inspirational speakers, provocative panels, interactive experiences and breakout sessions, the City of Tomorrow Symposium provides a platform to explore the future of urban mobility. Past participants have included mayors of major U.S. cities, transit system directors, tech entrepreneurs, academics, sustainability experts and community leaders.

Originally scheduled for May 5 In Washington D.C., the 2020 City of Tomorrow Symposium has been *canceled* over health concerns related to the coronavirus (COVID-19). Details for the 2021 event will be available later this year, but in the meantime, you can [Join our mailing list](#) to have information on the latest mobility trends and thought-provoking insights delivered right to your inbox.

Highlights from previous symposiums can be viewed in the gallery below.
