Frequently Asked Questions

What does Doppler do?

Doppler empowers engineers and their teams to quickly set up a secure way to store and manage their sensitive application secrets like API keys, database urls, certifications, etc... through a dashboard, API, and command line tool.

How long does it take to learn Doppler?

It generally takes an engineer around ten minutes to understand the concepts of Doppler, and another hour for it to feel natural.

Is Doppler secure? Where's my data stored?

Doppler comes with the kind of security, reliability, and controls that every developer tool deserves. Your customer data is never stored on our servers and we use end-to-end encryption to keep your data safe while it's in transit. For more information, see our [security documentation](#). If we don't answer

What do I use Doppler?

Doppler users typically use the dashboard to store, version, and manage their secrets. They also use our dedicated API and command line tool to fetch those secrets in their applications.

Can I deploy Doppler on-premise?

Deploying on-premise is part of our Enterprise plan and is coming soon. We will gradually release support for on-premise when it becomes available. Contact our [sales team](#) to get to the front of the line.

Do I need a credit card to sign up?

Absolutely not! We never ask for your credit card on sign up. If you start on a paid plan then 30 days after signing up you will be politely prompted to enter in your payment information. At anytime you can switch back to a free plan as long as your workplace has less than 6 seats.

your question there, **let us know**.

How will you charge me?

We ask for a credit card. Your credit card information will never touch our servers as we use **Stripe** as our payments processor.

For Enterprise customers we can do ACH if requested.

What counts as a seat?

A seat is anyone with their own login access to Doppler as is part of your workplace. All seats in your workplace are billed at the same plan rate per month.

How does billing work?

We charge per seat per month. Our billing system uses prorated billing, meaning you only pay for what you use. For example if you move to the Pro plan from the Community plan in the middle of the month, then you will only be charged for the time you are on the paid plan.

Can I cancel at anytime?

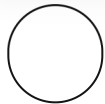

Definitely! You can cancel or downgrade your subscription at anytime. You can also delete your workplace in the settings page at anytime.

Wall of Love

Loved by hobbyists and forward-thinking companies for transforming their developer experience. It's an honor to share their stories.

"Doppler is Snackpass's trusted store of secrets. Setting up Doppler as our secrets manager across all our dev machines, CI, and production environments was a breeze."

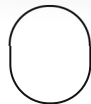

[Visit Snackpass](#) →

Udit Jain
CTO,
Snackpass

"As a small team with limited resources, we have a million things on our plate, and never enough time. **Doppler has made it extremely simple to manage our secrets and onboard new employees.** That's one less thing to worry about!"

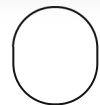

[Visit Stripe](#) →

Courtland Allen
Founder at Indie Hackers,
Stripe

"As a Fintech company, security and reliability are paramount. **Doppler has been critical in maintaining the integrity of our secrets while being extremely easy to use.** It's easily the best secrets management tool I've ever used and integrating it into our CI/CD pipeline was a breeze."

[Visit Point](#) →

Kenan Pulak
CTO, Po

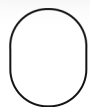

"Doppler is one of those products

"Doppler was easy to adopt as a growing team.

"Doppler is a foundational

that once you start using, you wonder how you functioned without it. It's a complete no-brainer. While the product is undoubtedly the best in its class, Doppler's support is par excellence too: because of some idiosyncrasies in our setup we ran into some edge cases. Brian patiently helped me get everything squared away on a Zoom call. **10/10 would use again.**"

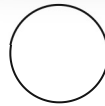

[Visit Intersect Labs](#)

Ankit
Gordhandas
CEO,
Intersect Labs

Recently, we passed through the security benefits Doppler offers to close a large enterprise customer. It has helped us build security best practice into our company and make more money."

[Visit Convictional](#)

Roger Kirkness
CEO, Convictional

part of our dev staging, and production infrastructure. Once you start using it, it's hard to go back. Doppler not only manages our secrets, but also various constants we want to share across our fleet. **We were accustomed to using similar infrastructure while at Facebook, and we're glad to have Doppler fill that gap without having to build it ourselves."**

[Visit Slapdash](#)

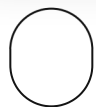

Ivan
Kanevs
CEO,
Slapdash

"Doppler helps me sleep better at night knowing our secrets are managed and safe. As we've scaled and added engineers as well as third party contractors, keeping everyone on the same page and making sure nothing leaks was crucial and with Doppler it was a breeze. Haven't had a single issue with keys since we

signed on - which says a lot!"

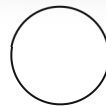

[Visit Tonebase](#) →

Abhi Nayar
Founder,
Tonebase

"Doppler is a game-changer for Kopa. We use it for securely storing our secrets as well as managing our environment variables for our client apps. **The ability to add, remove and update these variables simply and safely has helped us improve our processes and security immensely.**"

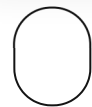

[Visit Kopa](#) →

Zach Waterfield
CTO, Kopa

"Doppler makes working on a distributed schedule super easy. **Any team member can add or change keys without needing to worry about syncing up with the rest of the team.**"

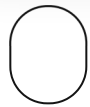

[Visit Visly](#) →

Emil Sjöland
CEO, Visly

"Doppler's secrets manager is not only secure but also improves the productivity of our engineers. **It is a joy to work with, and it also provides robust security to our (CI/CD) pipelines.**"

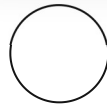

[Visit WeatherCheck](#) →

Jermaine Watkins
CTO,
WeatherCheck

"Doppler was a game-changer for us... Having a secrets manager with a beautiful dashboard and an amazing command-line tool greatly increased the productivity of our engineers."

[Visit Inkit](#) →

Michael McCarthy
CEO, Inkit

"One of our favorite developer tools is Doppler! We love them because any member of the team can **quickly switch environments to different servers to debug issues quickly.**"
