## Titan on Guard

GoSecure Web Security uses our unique combination of automated intelligence and expert human analysis to block things like malware, CryptoLocker and inappropriate sites. It also provides improved user productivity with low latency and false positive rates. This innovative approach ensures you have the most updated, advanced web protection 24/7 that is backed by world-class customer support.

policy and automated business directory integration in a hosted SaaS solution that can be provisioned immediately, without having to install any hardware or software.

- Email Security Gateway
- AV and malware scanning
- Mail reputation and custom filtering rule sets

### Postdelivery Detection

GoSecure Inbox Detection and Response (IDR) is the world's first managed postdelivery detection solution. GoSecure IDR removes the guesswork and provides an automated process for employees to report suspicious emails to the GoSecure Active Response Center—alleviating help desk resource constraints and reducing threat dwell time. When an employee receives an email impersonation or other suspicious email, with a click of a button, GoSecure IDR provides rapid and accurate investigation and incident response.

- GoSecure IDR Anti-Phishing Solution
- Digital threat scoring
- Combination of machine learning and human review
- Verifies or removes bad emails in minutes

### Incident Response

GoSecure's Inbox Detection and Response service includes automatic remediation of detected malicious email. When malicious email is detected by GoSecure IDR, a follow-up scan of your mail store can be executed to find the same message in additional inboxes and automatically delete or quarantine them.

- Global remediation of malicious email
- Alerting/reporting of phishing & malicious attacks
- Security operation center integration

### GoSecure Titan Protects Users

Threats like phishing, spear phishing, ransomware, BEC and other socially engineered attacks require pre and post-delivery protection, along with powerful incident response tools to guarantee these threats are eliminated across your enterprise. Only GoSecure Inbox Detection and Response gives you all three essential ingredients to keep your business, users and data safe from ever-evolving targeted threats.

### Unparalleled Detection

Leveraging a big data approach, our hunt team tracks threats from the edge to the endpoint. They analyze behaviors on-disk, in the OS and in memory to detect, predict and mitigate the most advanced threats.

### 24x7 Threat Hunting and Mitigation

GoSecure MDR features a dedicated hunt team with over 500,000 hours experience. They identify, track and stop advanced threats that other managed service providers miss.

### Consolidated Platform & Reporting

Our MDR features a unified platform consolidating multiple security functions and technologies. Alerts and reports are aggregated into a management portal accessible by MDR clients. GoSecure MDR also delivers a monthly report describing all the events seen, threats investigated, and action taken. [Click here](#) to view a sample MDR report.

### Aggressive SLAS

With client agreement, we will own mitigation. We back that with 15-minute threat determination-to-mitigation SLAs, the most aggressive in the market.

### Flexible Delivery Models

Available in convenient packaging, [GoSecure Managed Detection and Response bundles](#) are designed to address your needs today and tomorrow. To meet specific requirements, Titan can be customized and delivered via the cloud, on-premise or hybrid. Every organization is different, so GoSecure MDR is designed to be flexible enough to deliver the best outcomes for your organization.

### Maximize Your Security Resources

GoSecure Titan helps organizations maximize their security resources by allowing them to focus on what matters most. Few organizations have all the required security expertise in-house, so gaps appear that could lead to disastrous results. With GoSecure MDR, you can rest easy knowing you have the most experienced team looking out for you 24x7.

# Leading the Way for True Managed Detection *with* Response

Security Starts with Visibility but Must End with Response

Founded in 2012, GoSecure has worked towards one simple goal – preventing breaches. Tactics change, technology adapts, security teams ebb and flow in size and budget, yet breaches still occur. As organizations adopt a “when, not if” approach towards breaches, many are looking for true help, not just another new technology. GoSecure Managed Detection and Response is the only MDR solution that combines visibility across all major attack vectors with industry leading threat intelligence and operational experience. It's this unique combination that allows GoSecure MDR to detect breaches sooner and respond before data loss begins. Detection with Response – the GoSecure way!

<b>Board of Directors</b> Our Board of Directors features a dynamic combination of operational, military and management experience-levels that help guide GoSecure strategically.	<b>Leadership</b> Our leadership team brings a wealth of experience and knowledge both to the cybersecurity market and emerging technology innovation.	<b>In The News</b> Read the latest news in which GoSecure is featured.

# Why GoSecure?

Superior Technology with Operational Expertise Leads to Greater Security Outcomes

## Had Enough Yet?

Security is all about timing. All the security technology in the world is designed to either prevent something bad from happening or tell you when something suspicious is happening. For many organizations, this has led to technology sprawl, multiple dashboards (and vendors), and out of control alert notifications.

GoSecure Managed Detection and Response service is designed to reduce the alert fatigue while at the same time increasing the speed of detection. Only GoSecure has detection and response capabilities across all the main attack vectors, and multi-observational analysis to highly accurately correlate unknown actions, stopping breaches before they happen. Industry testing has confirmed that GoSecure achieves the highest rate of detection, even amongst previously unknown attacks.

## Industry Leading Visibility

GoSecure Managed Detection and Response delivers visibility across all the main threat vectors:

- Email
- Endpoint
- Network
- Insider Activity
- Web

Within each vector, we provide detection and response capabilities built on synergies derived from having multi-vector visibility. Knowing that ransomware is being delivered via email disguised as a vendor notification allows us to not only protect the email channel but update our endpoint detection capabilities with the ransomware details. Finding previously unknown malware as part of an Incident Response investigation upgrades the capabilities of all detection and response solutions.

## Broad Spectrum Advisory Services

With the shortage of security professionals continuing unabated, many organizations are looking for guidance. From top down security assessments to high and red/blue/purple team engagements, GoSecure Advisory services have broad capabilities to address the need for guidance
