**Come see us.**

The best way to decide how a HydroGreen system can fit into your operation is to see it in person. Our team of engineers, nutritionists, and researchers would be happy to host you at one of our facilities.

**Questions?**

**Let's Talk.**

**1**

**Schedule a Tour**

We'll take you through one of our demonstration farms in person so you can see exactly how the system works. Contact us and we can talk details and timing.

**Schedule Now**

**2**

**Matching HydroGreen Feed Demand With Your Production System**

Our team begin by defining your production goals, examining available feedstuffs, seed sourcing and pricing, and calculating the size of system required to produce that demand. We'll discuss water quality and availability at your location and then provide an initial cost for the environmentally controlled building.

**3****Quotation**

Your quote will include the cost of your proposed HydroGreen system and building design. It will also include:

- Warranty
- Useful life projection
- Seed sourcing document

**4****Installation**

Local contractors will build your feed production facility according to our recommendations and our installation team will install your HydroGreen system. You and your staff will receive training on the system's operation and maintenance.

**5****Ongoing Support**

We will continue to support you after purchase. Our design team of engineers work hard to make continuous advancements to the system to optimize productivity and efficiency. Our nutrition experts will assist you and your nutritionists by making recommendations to improve the performance, efficiency and general well-being of your animals. Our research team strives to find ways to improve system yield, nutrient concentrations, and the overall productivity of the system for our customers.
