

Cyber Security & Digital Forensics Specialists

Cyber Security Services

Cyber Security & Digital Forensics often go hand-in-hand. If you have been the victim of a breach, do not touch anything and contact a cyber security or digital forensics professional right away.

If you haven't been hacked – yet – consider yourself lucky... because it isn't a matter of "if," it's a matter of "when." How confident are you in your company's cyber security program?

Security and Compliance

Petronella Technology Group, Inc. serves customers who are affected by security and compliance regulations across many vertical sectors in both public and private organizations. We understand that every industry and organization can be faced with unique IT challenges. We understand security and compliance.

Our expertise enables us to help clients navigate the requirements of their industry – such as HIPAA, HITECH, Sarbanes, Oxley, DFARS, and NIST – to find a solution that meets their needs. We will partner with you to design, implement, and support a solution that meets your specific requirements.

We should be fair, and say that at the time of this update, the organizations that enforce these compliance requirements don't know how to secure even themselves. But they will unleash their justice upon you, and it may feel more like their fury.

For HIPAA, the U.S. Department of Health and Human Services (HHS) couldn't prevent a data breach of their own records if the right hacker group was motivated enough.

Neither could the Office for Civil Rights (OCR), the auditing arm of the HHS. But they will sure punish you if you are the victim of a data breach. They won't only punish you, they will shame you as well- on their "Wall of Shame" (true story). See the breach portal at https://ocrportal.hhs.gov/ocr/breach/breach_report.jsf.

But that's just HIPAA. Based on NIST 800-53 and NIST 800-171, the NSA should be fined for getting hacked and unleashing their beastly hacking tools upon the world. We haven't heard of any penalty imposed upon the NSA, as of yet.

But don't expect the same free pass. In the world of 3-letter groups, us commoners are not VIP.

But in the words of Marcus Tullius Cicero, ***"Live as brave men; and if fortune is adverse, front its blows with brave hearts."***

Which might be the best you can do, if you are subject to security and compliance regulations but are not prepared for an audit. Audits are already underway from several different federal rule enforcement agencies.

Secure where your data lives

"I am convinced that there are only two types of companies: those that have been hacked and those that will be. And even they are converging into one category: companies that have been hacked and will be hacked again."

-Robert Mueller, former Head of the FBI

TOOLS & CONTROLS

If you want to move your life ahead, you should replace the negatives in your life with positives this article will show you how to take the negative influences in your life.

SECURITY CONTROLS

There are a lot of rules and regulations to follow and it can be hard to know where even to begin. Fortunately, PTG has decades of experience to draw from in order to assist your business, regardless of the industry.

ZEROHACK CYBERSTACK

Hi there, welcome to our site!

Hi there, welcome to our site!

Why Petronella?

Due to the nature of cyber criminals, nothing is 100% truly unhackable... Especially when a human element is involved. But by blending various proven training, cybersecurity methods and technologies in a unique and proprietary process, we create a security stack so difficult to penetrate that hackers move on to an easier target.

And while many IT providers are just in it for the money, we TRULY care about our clients. Because when you join PTG, you're not just our customer, you become part of the PTG family!
