# Solutions

We collect billions of Climate and Economic data points every day.  
Leveraging millions of independent data sources and Structured Expert Judgement (SEJ) our ML platform generates thousands of derived **Climate Risk Datasets**  
This derived Climate Risk Data captures the uncertainty in market-related risk factors at numerous future horizons and is used by our API accessible **Multifactor Scenario Generation Algorithm** to Stress-Test portfolios and to generate a **Climate Risk Rating** and to calculate **Climate Risk Adjusted Returns**
