

## 1 Fungible and Non-Fungible Tokens

Smart Contract Development

Meet Us 

Winterwind specializes in Laravel development but is a full-service development firm offering a range of different services to support its clients.

Winterwind is Canada's leading blockchain development firm, having completed dozens of blockchain-related projects since 2017. We can help you integrate blockchains like Bitcoin and Ethereum into your application.

Few agencies have more experience than us with this framework which we have been developing on since 2014 (Laravel 3). We use a repository pattern to make your codebase robust and organized. Create lightweight APIs for your mobile app with Lumen.

Keep your data organized with lightning-fast read speeds by starting off with a normalized database design. Create stored procedures when race conditions are an issue for data integrity. Add triggers, multi-column indexing, foreign key constraints as your application demands it.

Create apps that can scale to a global audience handling thousands of requests per second by using our managed AWS services. EC2 and RDS DB creation, auto-scaling, IAM and security configuration, in-memory databases with ElastiCache are just some of the things that are possible.

Use Bootstrap 4 and have a website that always looks perfect on mobile, tablet and desktop. Winterwind employs senior front-end developers that will make sure your website is pixel-perfect.

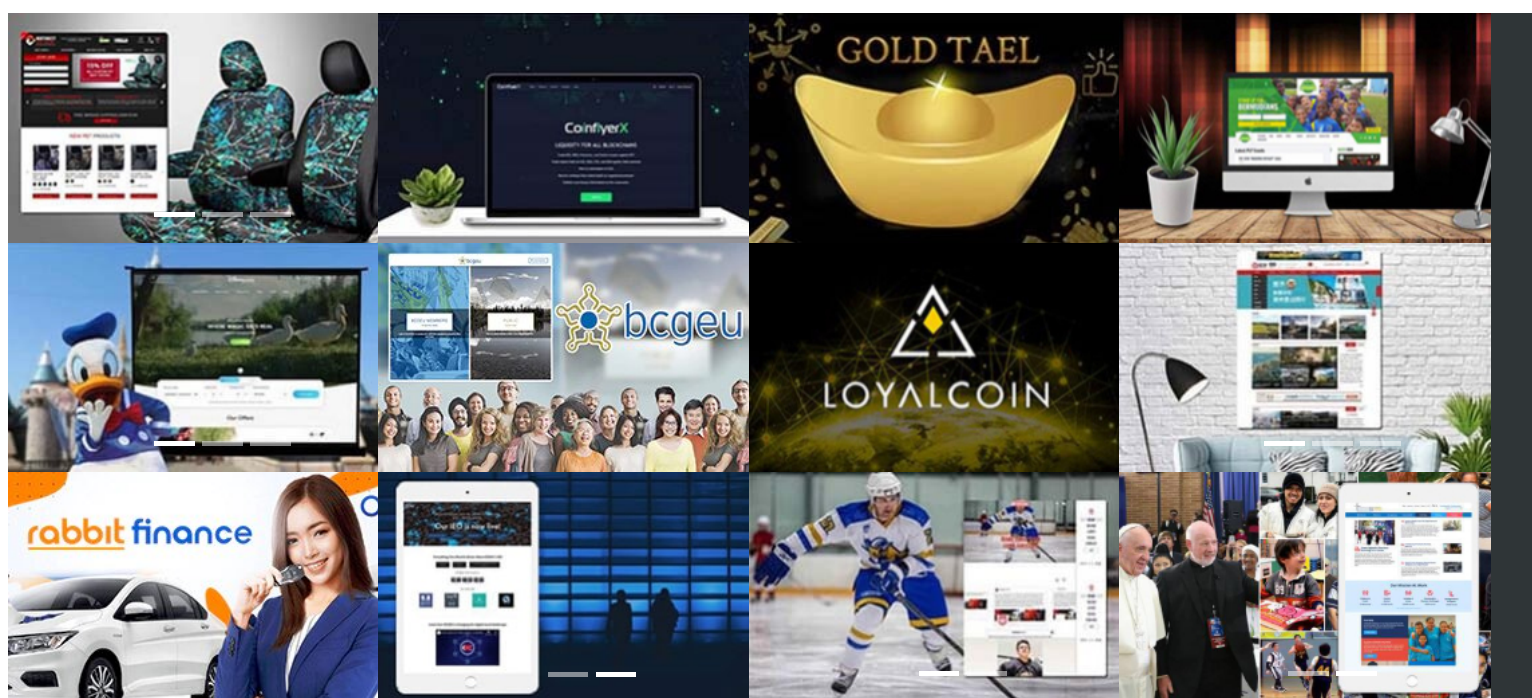

Do you have documentation and/or wireframes but no design yet? Winterwind has expert UI/UX designers on hand that can take your requirements and turn them into beautiful mockups within Invision or Figma.

WHAT WE DO

Our main goal is to deliver beautiful and bug-free software to our clients. It's also important to us to give good customer service along the way. There are many processes in place in the company that enables us to be fulfilling this goal on a daily basis. Winterwind is a full-service development agency aiding its clients with consulting, product conceptualization, wireframing, designs, development, environment hosting as well as providing long-term support.

Winterwind differentiates itself from other Laravel-based and Node-based development agencies in that it assists its clients with product conceptualization and design. This includes early discussions on what should be built prior to any design or coding happening. Once there is a clear idea on what needs to be built, if the client does not yet have wireframes or designs then Winterwind is able to provide these services. We have a full-time, world-class designer here ensuring that every product that goes out the door is beautiful and easy-to-use.

Western-managed

Winterwind was founded by ex-Disney and senior web developer Anthony Vipond. In 2018, Anthony founded Winterwind with the aim of being one of the world's leading open-source development agencies. Nothing has changed with his vision in this time and Winterwind is now a top web development agency from Canada, having completed dozens of projects in this time.

Anthony functions like a CTO on all projects in the company and ensures that the right resources are on each project and that the developers are adhering to the company processes and following all of the best practices during development. Anthony's technical prowess and direct manner ensures that all of the developers within the company are pushing out high-quality software on a daily basis. Only the strongest developers and designers are retained within the company to ensure that you always have an all-star team in place.

THE WINTERWIND PROMISE

We have six promises we keep to every client here! These promises help us deliver you high-quality applications in the shortest amount of time.

Bug-free Software

We will set up error-reporting in every layer of your application. Blockchain, API, Website, Server including alerts from AWS.

S.O.L.I.D. Code

We follow the five SOLID principles of object-oriented design. We will deliver modular, decoupled and layer-based code.

Tweaked Waterfall Method

We are not fans of Agile here and find it slow. Winterwind implements a queue-based system using Kanban boards.

7 Days Per Week

Software ships faster with us as we are open seven days per week. At least two developers will be assigned to you.

14 Hour Days

Winterwind management can be contacted at any time. between 8AM to 10PM Philippines Standard Time.

361 Days Per Year

We are only closed on Easter, Christmas Eve, Christmas Day and New Years. Having developers in several countries makes this possible.
