MEET WATERSCOPE

WaterScope is the world's most powerful Meter Data Management System. It leverages the finest granularity in the AMI industry with sub 1 gallon data reported in 5 minute and now even optional 1 minute time buckets to allow analytics never before conceivable.

New breakthroughs with machine learning algorithms interpret the incoming data for the user down to a level of dissecting household water usage by fixture.

Best of all, the system utilizes the existing Verizon LTE cellular network as its backbone, so the wonders of the WaterScope VN system are available to user of all sizes from the nation's largest water utilities to even single home owners.

RESIDENTIAL WATER METERS

The Spectrum Single-let Meter is the widest range, single measuring element meter available to

The Spectrum Single-Jet Meter is the most rugged, single measuring element meter available to U.S. utilities. The Spectrum residential meters are designed for extremely wide range and long-term accuracy. The single-jet technology is highly impervious to dirt, sand or grit in the water system. The combination of design simplicity, superior grade materials, and high quality manufacturing standards allows for years of virtually new meter performance with no maintenance.

METRON MASTER METERS

Metron Spectrum Single-Jet Master Meters give Mobile Home Communities and Multi-Family Structures the ability to measure 1/4 GPM flows (and below) on 1 1/2" and 2" meters accurately. Metron Master Meters are installed on the main water line entering the park and on lateral lines distributed throughout the park. In conjunction with your Submeters, a Metron Master Meter gives you full access to the most advanced consumption analytics on the market. WaterScope, our online data portal, automatically analyzes the consumption of the Master Meters with the Submeters alerting you when an infrastructure leak has occurred. We offer Master Metering Solutions for every application with meter sizes ranging from 1-inch to 8-inches

Metron Sustainable Services is the only full-suite water utility management system for mobile home parks, manufactured home communities, land lease communities, apartment complexes and HOAs.

to monitor water consumption.

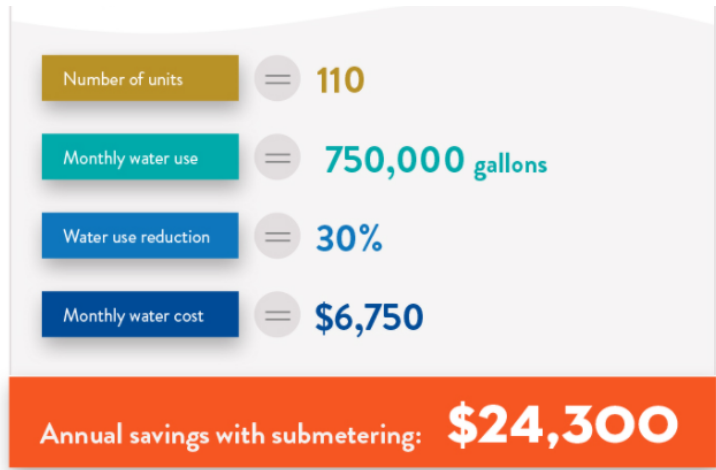

MEASURE

View down-to-the-drop water use for every household with **WaterScope**.

SAVE

Detect leaks, fix problems and invoice residents for only the water they use.

Increase the value and profitability of your property while you conserve water

Our smart water submetering system gives you the actionable data you need to better serve your residents, address fixable issues and conserve the precious resource of water — all while increasing overall community revenue.

LEAK DETECTION AND HIGH USAGE ALERTS

Find leaks that cannot be easily seen or heard, and fix them before they cause major property damage.

WATER CONSERVATION

When submetering is installed in a community, total consumption can drop by 30% or more.

AFFORDABLE PROPERTY INVESTMENT

For a small investment, submetering will help you prevent costly repairs, manage cash flow and increase property value.

RESIDENT SUPPORT

Residents pay based on their individual consumption — the fair way for you to reduce costs while helping residents monitor water use.

TAKE CHARGE OF YOUR MOST IMPORTANT RESOURCE.

multifamily housing, rental properties and HOAs.

you, whether you're building a new community or upgrading your existing property.

from existing management tools like Rent Manager and Manage America.

“We now have the ability to identify problems much faster, and we’ve seen overall water consumption decrease.”

— STEWART WINKLER, PRINCIPAL, URBAN WEST VENTURES

“Our system has worked perfectly. Over the past 18 months, we’ve only had two leaks.”

— ALAIN CAILLER, OWNER, CENTER VIEW ESTATES

“With submetering, we can pinpoint leaks and bill back for water usage to tenants.”

— STEWART JAMES, CLIENT SUCCESS MANAGER, TRUBUILD PROPERTY MANAGEMENT
