What is a "smart home"?

As technology has grown more advanced, it has given us unprecedented opportunities for making every aspect of our lives more efficient. Our homes are no different. At its most basic level, a smart home is a house where systems and appliances are controlled by a device connected to the internet. It puts control of your home in your hands. A truly smart home is where each of those internet-connected systems are linked together through a seamless automation system that helps you control every aspect quickly and conveniently.

 Monitor and remotely control your door locks. No more leaving a key under the mat or rushing home to meet the plumber. Fluent allows you to view and control your locks remotely.	 View 24/7 live video feeds from your HD cameras. Be home even when you're away from home. With high-definition indoor & outdoor cameras, never miss the good or the bad.	 Let schedules take care of it. Never forget to lock your doors, turn off your lights, or arm your security system. Let Fluent schedules take care of it for you.	 Be in the know. Your system will notify you. The Fluent app with the Automation package allows you to not only know what's going on in your home but also control it.

- On/off and dim controls

Automated Lamp Module

Automated Garage Door

Automated Thermostat

Enhanced security.

Never worry about what's going on while you're away. Our wireless home monitoring systems will keep you safe from break-ins, fires, gas leaks, flooding, and medical emergencies.

Convenience.

No more asking your neighbors across the street to keep an eye on things while you're gone or having to run around turning on lights when you come home.

Savings.

A smart home is an efficient home. Using energy and appliances only when needed puts money back into your pocket every month. No more wasted time, wasted trips, or wasted energy.
