# UltraPro S100 EMG/NCS/EP Neurodiagnostic System

[VIEW PRODUCT INFORMATION](#)

Developed in collaboration with physicians and technologists, the **next generation** UltraPro S100 builds on the success of the VikingQuest and previous UltraPro models, combining user-friendly controls and workflows with superior signal quality to help perform neuromuscular assessments with a greater level of certainty.

## Ultra-Simple. Ultra-Certain.

Designed with the user in mind, the UltraPro S100's enhancements in hardware and software make it easier for physicians and technologists to get better data when testing for common muscle and nerve disorders — and give patients better answers.

Enhance performance with the Ultra Pro S100

- Simple setup to start performing studies faster
- Familiar, customizable workflows and user-friendly interface
- Superior signal quality for high-definition EMG performance
- AANEM or customized reference values
- Added and improved testing capabilities

## A System Improved. Easy to use.

- Contains built-in control panel with an integrated speaker, an electrical stimulator probe, an amplifier, laptop computer and system software with connectors for optional devices
- Easy-to-use interface with intuitive control panel buttons and color-coded function keys — already familiar to VikingQuest users
- Stimulus probe programmable buttons for key function control at your fingertips
- Triple-programmable footswitch for hands-free operation
- Simple, three-cable setup to begin testing sooner
- Convenient, accessible connections to peripheral devices
