Easily check calls, messages and voicemail

Take control of your call with one tap

Stay on top of your messages

Save tir transcriber

Google Voice gives you a phone number for calling, text messaging, and voicemail. It works on smartphones and computers, and syncs across your devices so you can use the app in the office, at home, or on the go.

NOTE: Google Voice only works for personal Google Accounts in the US and Google Workspace accounts in select markets. Text messaging is not supported in all markets.

You're in control

Get spam filtered automatically and block numbers you don't want to hear from. Manage your time with personalized settings for forwarding calls, text messages, and voicemail.

Backed up and searchable

Calls, text messages, and voicemails are stored and backed up to make it easy for you to search your history.

Manage messages across devices

Send and receive individual and group SMS messages from all your devices.

Your voicemail, transcribed

Google Voice provides advanced voicemail transcriptions that you can read in the app and/or have sent to your email.

Save on international calling

Make international calls at competitive rates without paying extra for international minutes with your mobile carrier.

Keep in mind:

- Google Voice is currently only available in the US. Google Voice for Google Workspace users is available in select countries. Check with your administrator for access.
- Calls made using Google Voice for Android can be placed through a Google Voice access number. All access number based calls use the standard minutes from your cell phone plan and may incur costs (e.g. when traveling internationally).
