Backup Power When You Need It

Keep the power on at all times with Zap Cap Systems® – advanced surge protection and backup power for your home.

Stay protected against outages and power surges

When power issues like surges, momentary outages and flickers affect your home, it can be frustrating – and expensive. Zap Cap Systems keeps you and your major appliances protected.

How it works

The Zap Cap Systems surge protection [primary unit](#) is installed at your home to protect your air conditioning system, dishwasher and other major appliances. It's installed behind or near your electric meter, and is designed to absorb a large amount of transient surges before they enter your home's wiring. The primary unit is owned and maintained by Tampa Electric and cannot be tampered with in any way. A monthly maintenance fee of \$7.95, plus tax, is conveniently added to your electric bill to cover any unit upkeep or replacement.

The second layer of protection features sophisticated [plug-in protectors](#) that help safeguard your sensitive electronics. If momentary outages or flickers threaten your wi-fi connection, digital video recording device or other sensitive electronics, outfit your system with a UPS that provides surge protection AND battery backup to isolated equipment.

Did you know ...

High-voltage surge can be caused by a squirrel and that momentary interruption, or "flickers", can last up to a few seconds and is usually caused by a short circuit?
