

Your Zap Cap Systems Premium Service package can be customized to include surge protection and uninterruptible power supply (UPS).

The surge protection system works to divert most of the surge energy at the main service line, while providing additional protection from residual voltage inside your home.

The UPS safeguards your electronic equipment by delivering clean and consistent power and preventing interruptions.

When you're ready to order, call us at **877 SURGE 22** (877-787-4322) to learn about our bundled package pricing. Get the protection you want for the best value.

Prevent interruptions with back-up power

The Zap Cap Systems Uninterruptible Power Supply (UPS) service includes the CyberPower PFC Sinewave system. The sine wave output safeguards mid- to high-end computer systems, servers and networking hardware that use conventional and active power factor correction (PFC) power supplies.

In addition to providing reliable backup power when needed, its automatic voltage regulation technology delivers clean and consistent AC power by increasing voltage during minor sags without using battery power. This UPS unit is ENERGY STAR® qualified with patented GreenPower UPS™ Bypass circuitry to save energy costs by reducing energy consumption of the unit during normal operation.

Zap Cap Systems UPS Service includes a lifetime warranty of up to \$425,000 to protect connected equipment.

Typical applications:

- Personal electronics
- Desktop computers
- Home networking
- Home theater devices

Features:

- Battery backup for up to 810 watts of load capacity with 5 outlets
- Minimum 3-minute back-up battery supply
- Multifunction LCD panel with load level, runtime, battery level and troubleshooting indicators
- Built-in strip surge protection for up to 10 devices
- USB charging ports

Pricing:

- **UPS**
\$9.99 per month plus one-time installation charge
- **Surge + UPS**
\$15.95 per month plus one-time installation charge
*Includes **bundled discount** on UPS service*

One-time installation charge is \$44.95. Additional pricing options are available for multiple units.

Did you know ...

High-voltage surge can be caused by a squirrel and that momentary interruption, or "flickers", can last up to a few seconds and is usually caused by a short circuit?

Download our FAQs to learn more about Zap Cap and how it may help safeguard your home and electronics.
