DESCRIPTION

The R2 Training Machine, formerly known as the Rookie, is built to propel balls up to 330 feet and 75 miles per hour, making it the ideal tool for elite travel ball and college level defensive training. Crafted with a pair of Hi.Per aluminum discs, the R2 quickly fires balls across the field, maximizing the number of repetitions you get in practice. The high-definition ball chute provides a clear and uninterrupted view of the ball from feed to release, allowing fielding players to track ground and fly balls. Compact and portable, the R2 rotates freely while in use, empowering coaches to quickly pivot and train multiple fielders at different positions. Equipped with a Full Control Fungo System, the R2 delivers precise ball placement and control for ground balls and fly balls, and the complementary caddy pod simplifies transport and ease of use across the training ground.

Great for reps... hard to transport

The R2 machine is the best defensive tool I've ever used as a coach. The number of controlled, meaningful reps players get at practice is tripled or more using the R2. Plus, the coach can place the ball exactly at the location wanted and control the exact speed of the ball. My only complaint is that the body of the machine is heavy and a little bit of a pain to move if you are unable leave it at the field. While it's easy to take apart (3 pieces—wheeled base, body/motor/controls, and handle—in seconds), the machine's weight makes it difficult to move over and over going to and from youth baseball practices.

Engineered for Performance, Great Teaching Tool

The ATEC R2 is great for instructing players how to catch fly balls and is an excellent pre-game tool. Fungo a ground ball but, R2 the fly balls. Our team gets 200 balls prior to game that is impossible with a fungo. We teach how to go back on fly balls and it is consistent, versatile and a great tool.

Amazing

I've owned this for 3 years. It is such a great tool for pop flies. So efficient and fast. Gets tons of reps in. Run boys in all directions consistently. A must own. I loan it out all the time and coaches love it. Dial in the machine and work on everything from over the shoulder catches, sliding grabs and line drives. Boys have so much fun with it.

Great for the infield

We bought it for outfield drills but won't reach out there, but good for the infield..

Doesn't reach top speed or distance

The top speed is only 50mph and the top distance is only approx 200 ft.
