

VANTAGE

POLAR Series

Ridgeline International, an industry leader in digital signature management, offers data-informed training and consulting services to help our customers understand the UTS threat where it begins — with ubiquitous data collection (UDC) by the private sector — and mitigate the risks to activities in the United States and abroad. Ridgeline's *POLAR Training Series*, helps our customers understand their digital footprint, make better operational decisions, and use technology effectively in UTS environments. Ridgeline is the only company to integrate deep UTS and UDC understanding with practical mitigations tech-enhanced training.

POLAR-100: Risk Management

A three-day foundational course on UTS threat vectors that helps students assess their current posture, identify and mitigate UTS risks, and shape future policy and resource decisions. During this course, students will obtain a conceptual and practical understanding of UTS and UDC through in-depth case studies, scenario-based training, and hands-on exercises. This course is appropriate for students new to UTS concepts or those needing to integrate a UTS mindset into their core duties.

POLAR-101: Insights

A five-day course that provides hands-on introduction to Digital Signature Management using Ridgeline tech to visualize UTS threats. Insights helps students build a baseline of skills to mitigate risk and manage digital signatures at home and abroad. Students learn mobile device fundamentals, everyday UTS mitigation techniques, best practices for procuring technology and services, and essential skills for managing data at-rest and in-transit. Insight features extensive scenario-based training that addresses common use cases, including managing technology at home, work travel to sensitive sites, international personal travel, and OCONUS TDY and PCS.

POLAR-201: Applications

A five-day advanced digital signature management course tailored to a customer's mission. POLAR Applications begins with an in-depth study of online and electronic UTS threat vectors. Students then work through a series of practical and field exercises using tactics and technology that mirrors their mission in a simulated UTS environment. Ridgeline instructors guide students through planning, preparation, and execution, and then provide actionable feedback using data collection and analytics.

POLAR-301: Capstone

A five-day combined training and practical-exercise course that guides students through planning and mission execution in a UTS environment. Each Capstone scenario is tailored to the customer's mission. Instructors leverage Iris Vision to provide real-time feedback and detailed after-action reviews throughout the event.

POLAR: LABS

POLAR Labs are enhanced practical exercises that allow students to test and validate UTS mitigation strategies in scenarios based specifically on their mission set. Students receive real-time feedback from subject matter experts and visualize UTS threats using Ridgeline technology.
