

Zero post-processing
Part of the "FEATURES" collateral

 **Zero Post-Processing**

 **24-Hour Operation**

 **No Exposed Parts**

 **Durable Construction**

98.6% EFFICIENCY

Only Capna gets this efficiency without using agitation or soaking while skipping any type of post-processing, like winterization, de-waxing or filtration.

LOW ENERGY CONSUMPTION

Systems are designed to run lean and mean. Not only do we minimize the amount of mechanical components, we also make sure the components draw very little power. For example, our entry level extraction system draws a total of only 15.8 amps.

CONSISTENT QUALITY

A simple, consistent ethanol formula based on material volume removes the worry of operator confusion or variable quality. 200-proof ethanol is recommended, but other alcohols can be used.

GREATER MATERIAL USE

Our system severely limits the amount of waste by leaving behind less than 1.4% of cannabinoids in extracting material while accepting a much wider array of plant materials. It can extract anything from kief to wet material.

NEGATIVE PRESSURE

Our patented design provides a far more efficient method of moving ethanol from vessel to vessel during extraction. It also eliminates the risk of a leak or explosion for greater operator safety.

5X CIRCULATION

Plant material is automatically treated 5x during a single extraction to prevent any usable material from being wasted. The process itself can take as little as 30 minutes on average.

FILTERED PROCESS

All particles and plant material are thoroughly captured through the innovative use of a 40-micron tank liner and 10-micron evacuation liner. Winterization happens on a molecular level, thus no need to filter out any fat or waxes.

DIRECT EVACUATION

The system allows for easy evacuation of a rotovap or FFE to create a complete extraction-to-reduction loop. Negative pressure quickly transfers the extract to eliminate the need for operator intervention.

FINAL EXTRACT

Our system delivers a high-quality extract that requires no post-processing. It is ready to be used as a base in any product that doesn't require any fats and waxes— from distillate and live resin to a full spectrum crude oil.
