

Key Specifications

Ethos-6 can extract up to 14 pounds of plant material per hour, while drawing only 15.8 amps of power. The system runs on 200-proof ethanol and evacuates and transfers an emulsion from stage to stage in a fully enclosed, recirculating closed loop, making it safe for a single operator even if they have no prior experience. It can also be easily connected to the auto-feed of a rotary evaporator or FFE to create a complete extraction-to-reduction loop. Don't winterize, no post processing needed.

- 3600g/40 min. extraction throughput
- 136L/36 gal. ethanol holding capacity
- 85% solvent recovery rate
- 98.6% efficient with no post processing required
- Terpene content yield: 4%-7%
- Ultra-low extraction
