Current rating:
2 Amp peak power, 1A continuous in all, Each Functions maximum 100mA.

Loco Scale:
Good for HO & N scale

Model and Order Number:
860012

Function:
DCC Decoders for loco with NEM651 interface of wires

Dimensions:
14.5mm*9.2mm*3mm

OEM/ODM:
OEM/ODM is available, Contact with us.

Confirmation & Delivery:

- When you receive our products, kindly test it soon, then confirm it at once.
- **If you did not receive the package in the time, you can ask for money return via Aliexpress. Because we use Aliexpress logistics, Aliexpress will return the money back to you at once, they And the make a new order directly. Aliexpress will responsible for the lost. And you can make a new order at once.**

- If you have any problems, you are free to contact us before leaving any negative feedback.

TROUBLESHOOTING:

Nothing can go too badly wrong if the loco ran well before conversion, the decoder has been installed correctly and you pre-checked your installation on the program track as we advised, before putting it on the main line!

Nothing Happens:

- * Have you selected the address? If it's a new decoder it will be 3. If you did it a while ago & you can't recall its number then go to the program track & reset the decoder (CV8= 4), it will now be #3.
- * If it is not reading or running and you KNOW the address, be sure that it's not suffering from loco failure or a short circuit in the wiring or it will be damaged.

Light / functions will not work!

- * Have you turned the lights ON with Function 0 (zero) and also used the direction switch, remember white and yellow functions are both always directional by default.
- * Have you perhaps wired the LED back to front?
- * Did you add a resistor? If not you may have blown the LED! (the function will still be OK).

Help - I think I must have made a CV setting mistake. Now it won't work.
No problem! Just do a reset (CV8=4) and it will be back to the settings it had when you bought it.

It has got a big black hole in the heat shrink!
The only way this can happen is by incorrect wiring, overload or similar problem. You killed it, sorry!

If in Doubt, as a first step in checking decoders, always try a RESET by entering 4 into CV8

Color VS Function:

Orange = Motor Right
Yellow = Reverse Headlight FL(FOR)
Black = Left Rail
Grey = Motor Left
White = Forward Headlight FL(FOF)
Red = Right Rail

You need to connect a resistor 1K(1000ohm) 1/4Watt or 1.5K(1500ohm) 1/8 Wattother value in series when you use the function wires with LED to limit the current of led.

NMRA 6 Pin DCC Socket

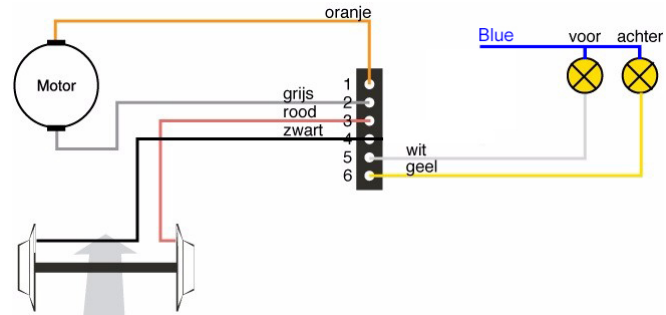

NEM651

Viewed looking down onto the top of the socket

- Functions:-**
- 1 Orange - Motor Right
 - 2 Grey - Motor Left
 - 3 Red - Rail/wheel connection (Right rail)
 - 4 Black - Rail/wheel connection (Left rail)
 - 5 White - Function (Lights etc Often Headlights)
 - 6 Yellow - Function (lights etc Often Rear red)
