The Ground Control GRID 2Bliss Ready tire is an exceptionally versatile trail tire. CAD engineered knob shapes strengthen the knob structure for optimal braking and traction, but knob surfaces remain adaptable for the best possible ground control. Meanwhile, our proprietary GRIPTRON® compound helps make this the perfect choice for epic trail rides in any condition...

Control casing is better 2 months ago

★★★★★
XC DESTROYER

they were 897 grams in 29x2.3 which is only seven more than expected. I'dk I was running controls on the epic before this and the grid is just too stiff for xc riding and aggressive cornering and rock gardens. I would have gotten control but it was not in stock. I did get a control gash but that was not something I would expect to happen in normal riding as it was someone else crashing into me not head on.

Weight is 25% more than stated 3 months ago

★★★☆☆
MARTYMCFLY

Bought these tires as they seemed like the best decent weight 29" tire around. They were substantially more expensive than others, but for the weight savings I figured it would be worth it. It was all a lie. Came in at 820g instead of 660g. I'd have returned if specialized had a decent return process. Looks like that's lacking as well. Is all up to the customer. Last time I buy anything from here.

A Good Tyre but STOP Lying about the weight 7 months ago

★★★☆☆
SCOTTO

This has been my go to tyre for my cross country/trail bike as I find the compound very grippy and it rolls reasonably fast. I haven't experienced much better puncture resistance from the GRID, so prefer the Control for the weight saving, but cant get it anymore in my sizing. Like many others have noted the weight is out by nearly 10% to what is stated and has been consistently higher on every one of these I've purchased, cut out the lying Specialized.

 XC GUY
 This is a decent tire but hard to get mounted on a stans are crest. It was on there once and I could not get it back on with out tearing up the rim tape and causing leaks.

- Much heavier than advertised**
 ★ ☆ ☆ ☆ ☆
 TODD
 I bought a 29x2.6" for my front tire a few months ago, it weight 905g on my accurate scale. A week ago I picked up the 2.3" versions to run on the rear, same exact casing as the 2.6". It weighs 910g. The 2.3" tire advertises 810g. It is 100g heavier which is totally unacceptable. I am disappointed.

 MIKE
 Besides my other review, on scales I measure 903 grams for my sample, whereas the stated mass is only 810 grams. That's more than 10% heavier than published!

- Couldn't mount them on Roval Control carbon rims**
 ★ ★ ☆ ☆ ☆
 MIKE
 I've had the non-GRID version on a Scott/Syncros wheel and they mounted up fine. But today I attempted to mount a brand new GRID one on a brand new carbon control wheel and couldn't do it. The bead circumference is far too small for the rim, or the rim diameter is too large. A Fast trak control mounts up AOK.

 TEAM TENNIS SHOE
 I've run both the regular Ground Control and the Grid version and definitely noticed the increased durability on the Grid. I've been running the 29x2.3's on my fully rigid cross country bike and love their grip and traction but also find they go fast when you push them on the flats. When my current pair wears out or otherwise needs replaced, I plan to go with the 2.6" for even more ground contact.

 AXEL
 I've had a stumpy since 2016 with 650 b 3" tires. they have held up to hell, through enduro, to road, to everything. in the three years, it still has tread, however there is a gouging hole in it due to a crash. but good thing i used tubeless, else I would have been stuck! Very great tires. Going to buy more.

- Grid Compound Only suitable for front tire**
 ★ ★ ☆ ☆ ☆
 FRANTIC29
 The grip with this tire is pretty good. I think the profile is a little too rounded or the shoulder knobs should be beefed up a touch. It makes for pretty fun fast rolling trail tire as is though. The Grid compound on the other hand just isn't durable enough to handle life on the rear of the bike. I have had 3 punctured on this tire and I found several more slices that are on their way to being real problems. Basically I have less than 50 miles on this tire and I am going to have to find another as one of the punctures will not plug. Probably will try out the Maxxis EXO/Tr stuff next. Really disappoint as I really like specialized tires but the GC doesn't come in a black diamond casing.
