

Animal Health Research Services

Animal Health

Our steadfast commitment to animal health and welfare does not end with our commitment to the animals in our care. Marshall is also committed to supporting important veterinary research that enhances the lives of our pets and other animal companions as well.

Vaccine Field Safety Trials

We can perform non-GLP vaccine field safety trials in canines, ferrets and cats to support the licensing for new veterinary vaccines.

Marshall is ideally suited to perform field safety trials as we use several veterinary vaccines ourselves to ensure the health of our animal colonies. We have a large variety of animals available, and populations can be selected based on age, sex, pregnancy/lactation status, and vaccination history.

Clinical Research Studies

We maintain an ABSL-2 facility which allows us to perform a wide variety of clinical safety and efficacy studies to support the discovery and development of animal health drugs and biologics.

Vaccine Trials

- Duration of Immunity
- Reversion to Virulence
- Spread of Virus
- Toxicology
- Bioequivalence, PK
- Reproduction Studies
- Endo- and Ectoparasites

APD/SPF Marshall Beagles[®] and Cats

Our barrier raised, Antibody Profile Defined/Specific Pathogen Free (APD/SPF) Marshall Beagles[®] and Cats provide the cleanest health status available. Our dogs and cats are available unvaccinated, and free of antibody titers for many canine and feline pathogens of interest, making them an ideal model for the evaluation of animal health products.
