# Saindo

EASY TO INSTALL AND USE - Comes with screws and double-sided tape for easy attachment to the transmitter's door frame. Easily plug the receiver into a power outlet (no batteries needed for the main receiver). To install just plug it in where you need to hear it, and place the button where you want someone to press the button. Remember the last melody and volume after a power outage; no need to reset to previous settings.

Classic Wireless Doorbell - A sleek, modern design that's smart and simple, elegant and unique. Excellent material insulates itself from higher temperatures and disturbances. Waterproof and dustproof, the remote transmitter button is IP44 rated. Operates between -4 °F to 140 °F; withstands a wide range of harsh weather conditions for outdoor use.

Long Operating Range - Up to 1,000 feet/300 meters of operating range in open areas ensures you hear the bell and answer the door in time. Whether you're a few rooms away or on another floor, in the garden or in the kitchen, you'll always be easily notified when someone calls from outside, ensuring you never miss a visitor.
