Date of Office Action: 09/28/2019

RESPONSE TO OFFICE ACTION

The Examining Attorney has issued a non-final action stating that the amendment to Applicant's mark CENTURION, in International Class 9, to include the goods "batter charges," is not acceptable.

Applicant filed its application for the mark CENTURION on Friday, July 12, 2019, and included the following as its recitation of goods:

battery or batteries for use in forklift trucks, in International Class 9

Due to a scrivener's error, the goods "battery chargers" were inadvertently left out of the original recitation of goods, and on Tuesday, July 16, 2019, prior to assignment of the application to an Examining Attorney, Applicant filed an amendment to its original application to include "battery chargers" as part of the mark's goods.

Applicant is also the Owner of the following U.S. trademark registrations:

Registration Number 4882750: CENTURION (design mark)

Modular and scalable mobile energy storage system used to provide multiple kilowatt hours of uninterrupted power, namely, an integrated power management system consisting primarily of lithium batteries, **battery chargers**, charge controllers and inverters, battery cables, in International Class 9.

Registration Number 5214326: CENTURION TELECOM BATTERY SYSTEM

Modular and scalable mobile energy storage system used to provide multiple kilowatt hours of uninterruptible power, namely, an integrated power management system consisting primarily of lithium batteries, **battery chargers**, charge controllers and inverters, battery cables, in International Class 9.

Registration Number 5214325: CENTURION UPS BATTERY SYSTEM

Modular and scalable mobile energy storage system used to provide multiple kilowatt hours of uninterruptible power, namely, an integrated power management system consisting primarily of lithium batteries, **battery chargers**, charge controllers and inverters, battery cables, in International Class 9.

As shown in each of Applicant's prior registrations, "battery chargers" are a part of its goods/services.

Conclusion

In light of the foregoing, Applicant respectfully requests that the Examining Attorney allow its mark to proceed to registration.
