

Exhibit B

INTRODUCES

For over three decades Ingenia has helped to shape the plastics economy, as both a customer and a supplier to primary resin producers, as well as a valued supplier to downstream convertors. We have provided products and services to the industry and are proud of our role in helping to create plastic solutions to fulfill society's needs. Plastics have made our lives healthier, safer and more convenient and we have supported developments in health-care, food packaging and the efficient movement of materials throughout our economies. Continuing our history of support to the plastics industry, we are developing solutions to help our customers meet their goals in terms of sustainability and the development of circular economy for plastics. We are proud to launch a new brand of products to support our customers sustainability goals and the plastics industry as a whole.

Introducing INCIRCLE by INGENIA - three new product lines designed to support the circular economy through distinct sets of product technology.

iNABLE

INABLE - INGENIA POLYMERS' recycle friendly technologies designed to enable film structures that contain ever higher levels of recyclate resin, functional additives or pigments that are derived from recycled sources and are themselves more easily recycled.

iNHANCE

INHANCE - INGENIA POLYMERS' Upcycling enabling products, designed to support recyclers in their efforts to enhance reprocessed polymer material properties.

iNBIO

INBIO - INGENIA POLYMERS' biopolymer based products, designed to support applications growth of polymers such as PLA and PHA/bioPET.
