Product Overview

The ergonomic arrangement of the rear and top handle on the Sportsman Series 20 in. 52 cc Gas 2-Stroke Rear Handle Chainsaw reduces vibration. The lightweight and balanced design makes it comfortable and maneuverable, reducing fatigue and the risk of injury. The Sportsman Series 20 in. 52 cc Gas 2-Stroke Rear Handle Chainsaw also features a built-in safety chain brake, which stops the chain in seconds to protect the operator and keep both novice users and seasoned hands accident free. Anti-vibration mountings on the handle round out the comfort and safety features. Make quick work of clearing undergrowth, pruning and trimming trees, cutting up firewood, and cleaning up after the storm with the 20 in., 0.058-Gauge chain with 76 links and a 0.325 in. pitch. The recoil pull start 52 cc 2-cycle engine features a primer bulb and runs on 18 oz. gasoline together with 0.448 oz. of 2-cycle oil, a 40:1 gas/oil mix.

- Ergonomic design, anti-vibration mounts, and a built-in chain break reduce fatigue and injury
- Clean up after a storm, clear overgrowth and cut up firewood
- 20 in. chain with 76 links, a 0.325 in. pitch and 0.058 in. gauge
- 2-cycle engine, 52 cc, 8,500 RPMs, recoil start with primer bulb
- 2,700-3,400 RPM idle speed, maximum torque 2.4 Nm
- Operates on 18 oz. of a 40:1 gasoline/2-cycle oil mix
- Built-in safety chain brake protects the operator by stopping the chain in seconds
- Rear handle with trigger release and throttle trigger and top handle with anti-vibration mounting
- High altitude use: this chain saw is not recommended for high altitude use above 3,000 ft.
- EPA approved; non-CARB compliant

★★★★★

December 9, 2019

Recommended Product

I have a few things by Sportsman, and like them all. I would not describe their line as refined, they are more robust. I heat with wood. I can not bring myself to buy an \$800+ chainsaw. Instead, I have numerous below \$200. When they start having problems (e.g. won't start, stall under load), I put them on the side and grab a new one. When I saw Home Depot was starting to carry a Sportsman chainsaws, I had to get one (at the introductory price, I actually got 2). On the positive ... with a gas bulb and choke, it typically starts on first pull. Also, I like how the side shows the gas mix ratio and chain dimensions. No idea how many times I have had to look that up on my other chainsaws. The chain is outstanding. I have had chains start to dull after a few hours. This is still sharp after numerous days/hours of cutting! It has a 1 Yr Warranty (many no-name brands are just 30 days) On the downside ... the chain adjusting tool does not mount; you have to carry it. Also, the chain will often stop (not the engine) when it gets to the middle of a 20" hardwood round; I have to 'saw' it to keep it going. Based on that, and how much quieter it is over my other 52cc's, I doubt it is 52cc. It sounds and runs more like a 46cc; and probably better paired with an 18" Bar/Chain. <https://www.youtube.com/watch?v=YE18WwW6E> I am a Seed Member, but I never seem to get chainsaws (or power tools), but at the price I paid, it is definitely worth a 5 Star review!

Seeds Program Review
 (What's this)

I am reviewing the Sportsman series model 804775 20 inch gas chain saw this week. The unit comes partially assembled requiring the purchaser to assemble the chain and bar to the motor unit. The problem I encountered in the assembly involved the chain brake position. As I discovered after multiple attempts to reinstall the side cover, the band was in the "lock" position. Once I forced the handle to the rear (it is a plastic assembly and I had been concerned about breaking it), the handle pulled back to the "open" position and assembly was actually quite simple. I think they should include a notation in the instruction manual to insure the handle is pulled rearward prior to assembly. After adding chain-bar oil and the proper 40:1 2 cycle oil/gas mixture to the fuel tank, the unit started with little effort and ran smoothly. My test of the product involved clearing an overgrown access roadway on my property. Multiple fallen trees of sizable diameter were cleared within an hour. I was pleased with the power, weight, and little vibration of the unit due to the rubber spacer isolation of the motor from the handle assembly. I understand that Poulan brand replacement chain blades will fit this unit. I have not had to opportunity to verify this to date. Chain pitch is 0.325 and Gauge is 0.058 if anyone wishes to verify availability prior to purchase. I think this is a good value chain saw for homeowner use in cutting firewood and clearing the occasional fallen tree. A professional would probably require a more robust saw with a metal, rather than a plastic, housing.

Pros: All In One, Cuts Well, Good Size & Weight, Powerful, Sturdy, includes a sleeve to cover chain during storage.

Cons: no case included for storage

Seeds Program Review
 (What's this)

Sportsman is a good name for this saw. While this saw was not made for the professional wood cutter, for most home owners this saw will do very well. There is some minor assembly but nothing much more than a normal bar and chain removal. Easy to start, has a fair amount of power and is not overly heavy. It comes with the typical tools needed for chain removal/adjustment and a small gas jug to pre-mix you fuel. Bar adjustment is on the side of the saw instead of in front, which I find to be very convenient.. A scabbard is included for safety and protection of the chain.. After an initial run out and minor break in it'll do very well.

Pros: Cuts Well, Easy to Use

★★★★★

January 22, 2020

Just put bar lube in it and pre mix gas from home depot. Tested it on a piece of 4 by 4. Cut through it like a hot knife through butter. For the size motor and bar, you wont find a better deal for a chainsaw anywhere of this caliber. First pull on choke it tried to start. Pushed the choke in started right up. 2 pulls to start wow that's awesome. Very impressive for a 100 dollar chainsaw.

★★★★★

January 21, 2020

I used roughly a half of tank of fuel. I shut it down to move some stuff and adjust the chain and could never get it started again. The primer bulb lines came off. Very poor quality saws and generators. Sportsman brand may as well be sold at Wal-Mart

Engine made by Yongia. Barely idles. Chain runs with chain brake engaged. Plastic in areas that there shouldn't be plastic. Engine is forged rather than machined. Gouges visible in forged engine casing. Never ever consider this product. I bought it while on sale for \$100 and now I am taking it back.

★★★★★

December 10, 2019

I am truly impressed , It has been a long time since I found a real great deal. I cut logs about forty years ago and I used top brand saws they cost over 600.00 dollars and I would put this saw against them, of course this saw is still new so I don't know if it will last like they did but so far it.

★★★★★

December 4, 2019

Underpowered for chainsaw with a bar that has length. But I bought it to replace a small chainsaw and overall I compared to the small chainsaw to replace it more than replaced the poulan 14 inch chainsaw. But it's the same size as my 20-inch stihl and is no competition for it.

Feedback

Product Overview

Keep your home running during power outages with the Sportsman Series 3500-Watt/4,000-Watt Dual Fuel Generator. Perfect for homeowners, contractors and recreational activities, it runs on either unleaded gasoline or propane for convenience. With four 120-Volt outlets, a 120-Volt RV outlet and a 12-Volt DC outlet for battery charging, this unit is also ideal for camping or tailgating. This reliable generator can run for 10 hours on a full tank of gasoline and 12 hours with a full 20 lb. LP cylinder. The 7 HP engine runs at less than 69 dB, so it's quiet enough not to be a disturbance. Includes a 5 ft. propane fuel hose with a regulator.

- 4,000 peak surge Watt and 3,500 rated running watt can run most household appliances and power tools
- High altitude use: this generator is not recommended for high altitude use above 3,000 ft.
- Great for use while camping, tailgating or on the job site
- Runs on gasoline or liquid propane fuel, giving you flexibility while out on the road or during an emergency
- 7 HP, 4-stroke OHV engine delivers maximum performance
- Four 120-Volt outlets, one 120-Volt RV outlet and one 12-Volt DC outlet; regulator hose kit included
- 3.6 Gal. fuel tank: gasoline run time 10 hours at 50% load; LP run time 12 hours at 50% load
- AVR (automatic voltage regulation), low oil shut off, spark arrestor, engine shutoff switch and circuit breaker
- Surge/running watt may be reduced 10% when using propane
- Propane tank and gas can not included
- EPA approved
- Note: this model cannot be converted to operate with natural gas
- Mobility kit available (sold separately)

CONTROL PANEL FEATURES :

This generator provides 3500 Running Watts (with 4000 Surge Watts)

Consider These Benefits When Using Propane Compared To Gasoline

- **Low Maintenance**
Propane generators have no carburetors, no gummed up fuel systems or stale gas.
- **Environmentally Friendly**
Propane burns cleaner than natural gas.
- **Infinite Fuel Shelf Life**
Propane will not degrade, so you can keep several propane tanks on hand and store them for an unlimited amount of time.
- **Safety**
Gasoline spills contaminate and leave stains and odors; propane will dissipate into the air.
Gas can and propane tank not included.

Wattage Consumption Guide

- 1 Using the item chart provided, select the items you wish to power at the same time. Then insert the corresponding numbers into the Running (Rated) Watts and Surge (Starting) Watts columns below.
- 2 Add up the Running (Rated) Watts of the items you wish to power and enter this number in the Total Running (Rated) Watts space.
- 3 Select the one individual item with the highest number of additional Surge (Starting) Watts. Take this one number, and add it to your Total Running (Rated) Watts, then enter it in the Total Surge (Starting) Watts space.

Tool or Appliance	Running (Rated) Watts	Surge (Starting) Watts
1. Refrigerator/Freezer	700	2200
2. 1/2 HP Furnace Fan	800	2350
3. Television	500	0
4. Lights (8 x 75 watts)	575	0
5. Microwave	625	0
Total Running (Rated) Watts = 3200		2350
Total Running (Rated) Watts = + 3200		
Total Surge (Starting) Watts =		5550

YOUR POWER NEEDS		
Tool or Appliance	Running (Rated) Watts	Surge (Starting) Watts
1.		
2.		
3.		
4.		
5.		
Total Running (Rated) Watts =		
Total Running (Rated) Watts = +		
Total Surge (Starting) Watts =		

With this example you need a generator that produces at least 3200 total running watts and 5550 total starting watts.

The information above is estimates only. For best results, check your tool or appliance for exact wattage requirements. The wattages listed are based on wattage requirements. For exact wattages, check the data plate or owner's manual on the item you wish to power.

* SURGE WATTS / RUNNING WATTS MAY BE REDUCED BY 10% WHEN USING PROPANE FUEL VS USING GASOLINE.

Generator Wattage Guide

- + Add All Running Watts for Items You Wish to Use
- + Add Single Highest Starting Watts out of Items You Wish to Use

- = Sum the Total of All Running Watts & Highest Starting Watts to Calculate Total Starting Watts Needed

Wattage Needs

*A hyphen indicates there is no additional starting watt requirement for this device

Awesome generator

★★★★★

April 4, 2014

Recommended Product

Features :	5
Quality :	5
Ease of use :	5
Value :	5

The generator is incredibly heavy like all generators but appears to be absolutely solid and a great piece of equipment! Really pretty simple to install wheels and handles but no thanks to the poor instructions. If you put the wheels on backwards they will rub against the frame, simply turn the wheel around and they turn freely. Another thing that is rather confusing is that it says that the engine holds 28.7oz of oil but it also says to add oil up to the threads of the oil dip stick. Well you can't have both apparently because I added a whole quart (32oz.) Of oil and it is still not up to the threads....and yes I did this on level ground. All said I really love this generator!!!! We don't have to worry about old gas messing up the carb since we are using (2) 100 lb LP tanks. The gasoline option is still really nice especially since put a good quality gas shut off valve in line. If I do use gas then I simply need to shut the valve off while the generator is still running which will run the gas out of the carb and thus no problems. After giving it a test run it easily ran a fridge, 2 tv's, furnace, all lights downstairs and upstairs and a computer on dsl. It is a high power generator and that is why we got it. With everything running it still wasn't running hard or at capacity.

Pros: Durable, Easy to Use, Sturdy, Strong, Long-Lasting

Cons: instructions could be better

Great value. Delivery in less than 5 days from order to my home. It's a heavy generator so go with free home delivery. Assembled quickly and all of the instructions were very clear. A couple of other reviews were very helpful in terms of break in (change engine oil after 1 hour with no load, etc). I might have missed that part of the instructions if I hadn't read the other reviews. Hooked up to propane tank and it started on 2nd pull. I'm not going to buy a battery for the electric start at this point. Ran a fridge, compressor and hair dryer and the generator didn't even need to rev up. Now just waiting for electrician to install outside outlet to connect to!

Pros: Easy to Use

I purchased this a couple months ago, and have not used it till this week. I live in Florida. This week we had Hurricane Matthew come here. When I returned to my home. I was happy I had no damage, but no power. I pulled the generator to the car port. Read the instructions, and in 10 minutes, I had the generator running with two pulls of the starter cord. It ran for four days, with no problems. I checked the oil and added gas every hours. Ran A/C, fridge, TV, lights, and laptop. Even made coffee in electric pot. It was a workhorse. I will take care of it as it took care of me. I highly recommend it.

Pros: All In One, Easy to Use, Strong, Sturdy

Boy, am I glad I read the reviews. Thank you one and all. The owner's manual is not all together accurate. Mine said I could call Buffalo Tools, the wholesaler, to buy the battery. I called. They told me they don't sell batteries. They are a little hard to find but fortunately we have an Interstate Battery store near us and wow, were they helpful. If you don't have one nearby, go on-line and have them ship you one if you can't find one elsewhere. The directions were very little help in putting the portability kit on. A review I read said tip it on the side as it is not shipped with oil. Very good idea. I would attach the battery terminals before installing battery as it is a very tight fit. I would also use a bread tie on the battery wires as they can easily rub against a hot engine or generator part and burn. Haven't started it yet but my wires would have definitely burned.

Pros: Durable, Sturdy, Strong

Cons: instructions not entirely accurate.

I wanted a generator that would run on anything but , mostly NG. If you are hooking to house NG then do Not use the regulator as instructed as house is already at correct pressure. So after removing the regulator it runs great, nice and smooth, did not smell any fumes at all. I want even try gas unless i move and no need for propane. Unit is very heavy.

I received this generator last weekend. The truck delivery was easy, the driver took the generator off the truck and used a big hand truck to bring it down my steep driveway which was appreciated. I had an electrician wire in a whole house transfer panel switch into my 200Amp service box. This allows me to select any circuits off the panel to keep on as long as the generator supports the load. I used gasoline to fire up the generator for the test and it started on the first pull. My plan is to update my NG line to the house and have access to that set up outside so I can run on NG. But for now, all set with the big gas cans in case power goes out. The only thing I would say it that having to source the battery is a bit of a hassle but I don't expect to need that until I switch to NG. I understand that the generator can be more difficult to start on that fuel. During the test I left everything on and we cut over the whole panel and the generator didn't miss a beat. I had the heat on some lights and both refrigerators so that was great.

Pros: All In One

Cons: no battery included

9,000-Watt 15-HP Tri-Fuel Electric Start Portable Generator

★★★★★

January 20, 2015

Features : 4
Quality : 4
Ease of use : 4
Value : 4

As long as you overlook minor details, such as the minimum oil level being quoted in Fluid Ounces, instructions failing to mention how to affix the wheels and support blocks, a missing hexagonal nut and washers etc then the overall product was very good and started on second pull (once the fuel tap was turned on (ok - another thing they don't tell you about). But this product clearly is 'nt made for those who don't know one end of a socket wrench from another so that's ok.

Pros: Durable, Easy to Use, All In One, Sturdy, Strong

Ease of use : 5
Value : 5

When our power went out in the windstorm Tuesday afternoon about 4:00, I was actually kind of glad - my opportunity to see how the generator would work in "the real world". I rolled out the gen, hooked it up to the house propane (2X 100Gal tanks), the gen transfer switch and the ground and fired it up. So 15 minutes after the power went out, the whole house was back up and running pretty much like nothing happened. My big power consumers are 1) mini-split Mitsubishi AC heat pump 2) 2KW Cadet heaters in each bedroom/bathroom (master,

master bath, 1 BR used as office, 1 spare BR and 2nd bath) 3) 4KW hot water heater. I managed power consumption by turning off the CB for the Hot Water heater and the Cadet heaters in the spare BR and guest Bath. Everything else in the house worked as normal. Power outage lasted until 7 AM the next morning (about 15 hours). If I had needed the hot water, I would have turned off the Cadet heaters and turned on the HWH until it heated up. Propane tanks were full (80%) before the outage and after, one read 70% the other read 75% so let's say I used 15% of the 160 gallons = 24 Gallons or 1.8 Gallon per hour. This means I can get roughly 3 to 4 days of power on one fill-up of my propane. If an outage runs longer than that, I can get the propane company to re-fill the tanks. I'm very pleased. Now I just need to figure out some way to baffle the noise and protect the gen if it happens to be raining during the outage....

Pros: Easy to Use

Ease of use :		5
Value :		5

I bought this generator a few months ago in anticipation of future power outages that we have here on Whidbey Island, especially in the winter. I did not rate the generator when Home Depot first asked me to, because we hadn't lost power, so I didn't feel like I could fairly rate it. Well last Tuesday we had a strong wind storm and lost power for about 24 hours. So I've had my chance to use my new generator at last. It's exactly what I had hoped for. I don't have to worry about how old the gasoline is, or how long it's been in the tank. I have a propane tank sitting beside the generator. It could sit there for years and still be good! The generator starts so easily that I don't see any reason to buy a battery. It starts usually with one pull! And it handled everything I needed in the house, the essential things, like the refrigerator, lights, and the fan on the propane fireplace. I didn't get nearly as much out of it as I could have. It didn't labor at all under such a small load as I had on it. I ran it for about six hours or so and didn't use up that one tank (20 lb). I am very happy with it and would definitely recommend it to others. I just wish they made a smaller and cheaper one I could buy for our community well. We have a gasoline generator on in, but it's such a hassle having to deal with gasoline.

Pros: Easy to Use, Good Size & Weight
