## **REMARKS**

This responds to the Office Action dated 7 October 2019. Applicant thanks the Examining Attorney for the examination of this application and notes that the Examining Attorney's search revealed no similar registered or pending marks.

#### **DESCRIPTIVENESS REFUSAL**

In the Office Action, the Examining Attorney maintained a descriptiveness refusal on the Principal Register on grounds the mark is merely descriptive of the goods and services recited in the application. Applicant respectfully traverses this refusal based upon the following arguments and authority. In a telephonic conversation with the Examining Attorney, Examining Attorney expressed she was willing to reconsider the refusal if the Applicant would (1) amend the identification of goods and services per below, (2) provide written answers in response to the "Additional Information Required" in the Office Action, and (3) provide evidence that the term "Minibunion" is not commonly used in reference to tailor's bunions or bunionettes.

#### **AMENDMENT**

Please amend the identification of goods in the application to read as follows:

Surgical implants comprising artificial material and associated surgical instrument sets (ORIGINAL)

Surgical implants <u>used in minimally invasive surgery to correct bunions</u>, <u>excluding tailor's bunions</u>, comprising artificial material and associated surgical instrument sets (AMENDED)

## ADDITIONAL INFORMATION REQUIRED

To permit proper examination of the application, applicant must provide the following additional information:

(1) Explain whether the wording in the mark "MINIBUNION" has any meaning or significance in the surgical implants industry.

The wording MINIBUNION does not have any meaning or significance in the implant industry. Applicant's use of the phrase "mini" as part of the name suggests the minimal surgical exposure required to implant Applicant's device. The term "bunion," is a noun derived from the French word "bump," and merely describes a clinical condition. Therefore, Applicant's use of the word combination is not to imply a "small bump" as may be indicated by the word definitions, but rather, as characterizing Applicant's proprietary, patent-protected minimally invasive surgical approach and incision to address a bunion of any size, shape, and form.

(2) Respond to the following questions:

Are applicant's identified surgical implants used to treat or correct bunionettes, "tailor's bunions," and/or small bunions on the outside of the foot (at the base of the little toe)?

No.

Are applicant's associated surgical instrument sets used to treat or correct bunionettes, "tailor's bunions," and/or small bunions on the outside of the foot (at the base of the little toe)?

No.

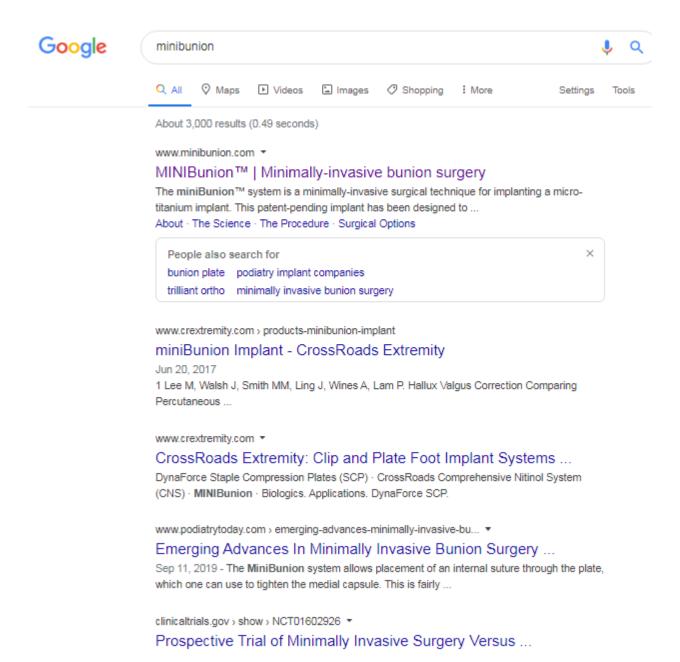

3. The Applicant submits Appendix 1 as evidence that a common Google search

results in a lack of evidence the term minibunion is ever used to refer to "small bunions," "tailor's bunions," or "bunionettes." In contrast, the first and highest hits reveal and support Applicant's claim that minibunion is used primarily, and almost exclusively, by Applicant as a source indicator of its services. The evidence, therefore, shows the term merely suggests, rather than describes, the minimal surgical exposure required to implant Applicant's device; and has nothing to do with tailor's bunions.

#### **CONCLUSION**

For the reasons set forth above (and as explained in Applicant's previous Office Action Response), Applicant respectfully requests the Examining Attorney to withdraw the mere descriptiveness refusal and approve the present application for publication and ultimate registration. If there remain any unresolved matters, Applicant respectfully requests the Examining Attorney to telephone the undersigned attorney to expedite the handling of this matter.
