Thermo Scientific™

Endura MD™ Mass Spectrometer for in vitro diagnostics

Related applications: Industrial Chromatography

Develop in vitro diagnostic tests that leverage the sensitivity, quantitative accuracy, and confidence of mass spectrometry with the Thermo Scientific™ Endura MD™ mass spectrometer. The Endura MD instrument, a Class I medical device, combines excellent sensitivity, quantitative performance, and robustness with built-in usability to help deliver more value and worry-free results from laboratory-developed clinical diagnostic tests. Combine the Endura MD MS with the Thermo Scientific™ Prelude MD™ HPLC and ClinQuan MD™ software, and get the quantitative accuracy of LC-MS easily and confidently.

U.S. FDA listed Class I medical device. CE IVDD compliant.

[Full specifications](#) ►

Confidence in results

- Delivers excellent sensitivity for a wide range of compounds and matrices
- Minimizes signal noise by removing more solvent vapor and blocking neutrals
- Provides five orders of dynamic range for accurate quantitation of even low-concentration or limited samples
- Features ultrafast selected-reaction monitoring (SRM) so more transitions can be monitored for greater confidence
- Accommodates both HESI and APCI probes, which can be operated in either positive or negative ion modes to meet varied analytical demands

Outstanding robustness

- Reduces the amount of solvent vapor introduced into the vacuum system for greater robustness and reduced maintenance
- Blocks neutrals, keeping the ion optics cleaner and performing better
- Maintains mass accuracy and stability with advanced electronics

Ease of use
