

## Common Vulnerabilities and Exposures

*The Standard for Information Security Vulnerability Names*

**CVE®** International in scope and free for public use, CVE is a dictionary of publicly known information security vulnerabilities and exposures.

CVE's common identifiers enable data exchange between security products and provide a baseline index point for evaluating coverage of tools and services.

### Focus On

#### Requesting CVE Identifier Numbers

There are two primary ways to obtain a [CVE Identifier](#) (also called "CVE-IDs," "CVE numbers," "CVE names," and "CVEs") before publicizing a new vulnerability:

1. Contact one of the official [CVE Numbering Authorities \(CNAs\)](#), which will then include a CVE-ID number in its initial public announcement about your new vulnerability.
2. Contact the CVE project to [Obtain a CVE-ID](#) and we will provide you with our "CVE Identifier Reservation Guidelines for Researchers" and work with you to assign a CVE-ID number while you work through the process of publicly disclosing the vulnerability.

Please review the [Researcher Responsibilities](#).

Use of the Common Vulnerabilities and Exposures List and the associated references from this Web site are subject to the [Terms of Use](#). For more information, please email [cve@mitre.org](mailto:cve@mitre.org).
