

Manage Your Diabetes, Manage Your Skin Care

TriDerma can make a difference

If you have Diabetes, your skin needs special care. Fluctuating blood glucose levels, certain types of medications, and poor circulation can cause skin to lose vital moisture. When your skin is compromised it can lead to skin cracks, infection, bruising or wounds that heal slowly. Left untreated, these problems can develop into serious skin conditions.

That's why TriDerma® has developed the first and only complete line of Diabetic skin care to target the specific needs of Diabetic skin. Each product is specifically formulated to help provide faster healing and daily protection for bruising, dry skin, ulcers, hard to heal sores and damaged feet. All of these non-greasy products are fragrance, Paraben and Cortisone free.

Bruise Defense Healing Cream™

For thin skin or those who bruise easily.

Dry Skin Defense Healing Cream™

Provides intense moisture for extra dry skin.

Foot Defense Healing Cream™

Helps provide healing for damaged feet.

Ulcer Defense Healing Cream™

Helps heal ulcers and hard-to-heal sores.

TriDerma® Diabetic skin care products make it easy to manage your daily skin care needs for healthy skin.
