About CVE

The mission of the CVE Program is to identify, define, and catalog publicly disclosed cybersecurity [vulnerabilities](#). There is one [CVE Record](#) for each vulnerability in the catalog. The vulnerabilities are discovered then assigned and published by organizations from around the world that have partnered with the CVE Program. [Partners](#) publish CVE Records to communicate consistent descriptions of vulnerabilities. Information technology and cybersecurity professionals use CVE Records to ensure they are discussing the same issue, and to coordinate their efforts to prioritize and address the vulnerabilities.

Introduction to the CVE Program, including what is CVE, goals of the program, who operates the program, and program organization.

Episode 1 - Tod Beardsley of Rapid7, Tom Millar of CISA, Chris Levendis of the CVE Program, and Dave Waltermire of NIST's NVD discuss how their organizations and the community all work together to advance the CVE Program's mission to identify, define, and catalog publicly disclosed cybersecurity vulnerabilities.
