A complete platform for adapted IoT solutions

The Orange Business Services marketplace is your new platform to start your IoT projects by purchasing connected objects, connectivity, and ready-to-use offers. The Internet of Things is the new technology that allows manufacturers and companies to better control and control their professional activities. This includes the ability to make savings, by improving their internal processes and optimizing the use of their machines. The Internet of Things is also an opportunity for a company to develop new services through a better knowledge of the use of its products and the development of an interaction with its customers.

The Orange Business Services marketplace helps you manage your IoT projects

IoT allows the development of tailor-made bespoke solutions for your company. It is still Nevertheless, it is necessary to find the connected object, the connectivity and the software that will allow them to be created, controlled and managed. Our objective is to be able to satisfy your specific needs. With Datavenue Market, Orange Business Services saves you time and money. You can easily and quickly find all the IoT modules you need on a single platform.

A catalogue of objects to boost your connectivity

Datavenue Market is a vast catalogue of IoT objects that includes products from both major IoT manufacturers and Orange products. Whether it is for the analysis of machine activity with dedicated sensors, temperature monitoring, risk prevention, geolocation of equipment, we have all the essential components for your IoT solutions. On Datavenue Market, mastering the new IoT technology has never been easier.

Ready-to-use solutions for an easy start

To build an IoT project, a company needs to bring together several components: a device, connectivity, data recovery software. On Datavenue Market, IoT becomes accessible to as many people as possible, with all-in-one offers. You buy directly the package that corresponds to your needs: whether it is the reduction of your energy consumption, the follow-up of materials, everything is thought and combines in a single package for you (the connected object, the LoRaWAN and LTEM connectivity or 3G, the visualization software).
